

**Nishma Research – Chevrah Hatzalah Survey**  
**COVID-19 Attitudes and Vaccine Hesitancy in the U.S. Orthodox Jewish Community: Views Among the Chasidish, Yeshivish, and Modern Orthodox Segments (May 2021)**

**Verbatim Responses**

**You checked “I don’t think I need it (the vaccine).”**

**Why do you say that?**

- I have natural antibodies to the virus
- Never took a flu shot either, and never had the flu.
- I am young and healthy maybe when I will be older
- I already had covid
- I'm yong and strong
- I had covid
- I've been walking around and traveling amongst many different people for about a year now and i don't need to take a vaccine for something that is not affecting me
- I had covid already
- Because I don't think that this virus is any different than all the other viruses out there by now.
- Because RL10 said that it's not needed.
- I had it and if i get it ill be ok
- I have antibodies
- I've had the virus already. And I'm young enough not to worry about covid.
- Cause I'm young. And from the people I know only 60 and above where the people most affected from the virus
- Still have immunity after a year. So why take it?
- I am still young. I was next to people who had covid and I never had it.
- Because they himself don't know much about it
- Because I recently checked my antibody level and it's pretty high.
- Healthy and young #tyh
- Had Covid already. Not scared of getting it again. For a perfectly healthy person, it's a smaller risk than the vaccine.
- Firstly, I had COVID And I don't think it's effective
- Young and healthy
- Im a Young adult, I feel like the risk of covis is very low
- I had covid already
- because i most probably had it, and i think that once you get your immuned
- Not possible to get COVID again. COVID very easy to deal with it.
- I already had COVID
- Antibodies
- Vaccines create antibodies The diseases creates antibodies. I had the disease I also got monoclonal antibodies.
- It's a common virus which most people don't need anything to get over
- Age, health status, previous infection
- There is no proof that this vaccine is working, I don't want to be a guinea pig!!!
- Already had it, in a low risk demo. Likely good of getting it again is low. Likely good of getting worse than 1st time is even less
- Real immunity is from the virus itself since I did have covid-19 I don't think I need something that It might need boosters every year
- I'm still young and the risk is sooo low
- Had covid
- Because I have covid19 antibodies
- I had the coronavirus and it was not bad I have antibodies and I am 30 and there hasn't been more then 5 cases in my neighborhood since October
- Because I am young and healthy Bh
- 98% of people recover from it why take something that is 95% effective and not sure how mrna therapy works long term
- My body is creating it's own antibodies
- I already hade covid and I have antibodies
- Have antibodies
- Because covid is not a dangerous disease for people in my age group covid statistics demonstrate that covid is a disease that mainly affects older individuals. Regardless I have already got covid and have antibodies and T cell immunity
- Because i tested positive in march of 2020 and was very sick with the virus
- I had it and am not in the age in which it is dangerous for
- Because I already had COVID.
- Im not affraid of yhe Virus, So why bother..
- I have antibodies
- I had covid already
- I am 26, had Covid, and do not have any health issues
- i am reletively young and healthy.

- In my age group, covid-19 is not something that I should be worried about more than strep. There are amazing and effective treatments for one who gets covid-19 at this point in time.
- I had the virus and i have antibodies
- I had Covid, BH my body handled it. I'm not high risk.
- I believe in Hashem. He created an immune system.
- I already had covid and wasn't severely sick boruch hashem, so even if I get it again it hopefully won't be bad. Most doctors I've spoken to said if you're not high risk - don't rush
- I was sick with covid in March 2020 and survived .. and younger than 40.. Unless I need it for travel I will most likely not want to take it.
- I already had covid.
- too young
- I'm not scared of coronavirus
- I had covid-19
- I had covid already
- Because I'm a young healthy adult and I had corona already without any symptoms and I don't see a reason to get it
- There are other treatments for the virus, and my age.
- Because I've never gotten covid-19 and I seem fine ( I feel that if I get the vaccine then I might have issues...)
- Age and good health BH
- Since it doesn't protect from Covid anyway
- I had covid-19, 99% people didn't get it again, I'm young and healthy, there's no reason for it, you don't know the side effects from the vaccine, every vaccine takes five to eight years to develop this is less than a year,
- I had COVID and consistently test with high antibody titer level. A vaccine sciences expert told me I don't need it at this point.
- I'm young. I understand that I can be a carrier for older people. But they should get the vaccine and the remaining risk factor is not something I feel like I have to worry about.
- I have natural anti bodies from having the virus. Why would I need the vaccine that is only here to mimic what I already have. It is unknown that the vaccine effectiveness is better or longer that the natural anti bodies
- Nothing will happen to me if I have covid one more time.
- I dont agree that covid is life- threatening. It seems to me that most xovid deaths were related

to negligence and politically advised medicine withholding. I believe that xovid can be treated with strong antibiotics, serious, etc, and that the vaccine is more dangerous than the disease.

- Because I'm young, and I already was infected.
- Had Covid. Vaccine has not been proven more effective then having covid...
- I had covid and I have immunity Why would I need a vaccine for it Its beyond any logic to take the vaccine at this point
- I'm young and have antibodies
- no health issues B'h
- As a young healthy adult under the age of 30,I refuse to get vaccinated for a virus which has a less than 1% mortality rate. This vaccine is not around long enough for me to feel comfortable putting in my body. I'd rather take my chances with natural immunity.
- I have antibodies and am not the age that COVID is a major threat
- I never had Covid
- I already had covid and ppl don't get it twice
- I'm young and can easily survive flue like symptoms
- I had COVID, and don't believe a vaccine can be more effective than actual COVID
- My antibodies have been going up (tested a few times since I've had Covid), and I've had multiple confirmed exposures to Covid and never got sick or had any symptoms.
- I'm young and I think by now covid19 has passed. I am not sure who the vaccine is supposed to protect, me or others. I am more than happy to give my vaccine to others who may think they need it.
- I've acquired immunity naturally.
- So says the doctor.
- Why would I take a vaccine developed for a virus that was developed with the goal of vacinating me ,why would i trust a vaccine from the very people who made me sick in the first place
- Because I had covid already
- I had actual COVID-19
- I'm young and not at risk and all restrictions are still being enforced so what's the point
- Have antibodies
- I already had Covid, not very concerned with the chance of getting it again
- Have antibodies.
- Because I had the live virus...
- I had the virus and I have antibodies.

- Already had covid. 2. Even if I get it again, no big deal (based on my experience the first time) so why take a chance with a vaccine. 3. A govmt and Big Pharma who lied to us about hydroxychloroquine and ivermectin is not too be trusted.
- I have high antibodies
- The survival rate for COVID-19 for regular middle age health people is 99.99%
- Because there is enough good treatment out there & a cure for it, so it's not necessary. Plus I wouldn't trust Bill Gates cuz he is the one that has this agenda to populate the world, so why would he suddenly want to "save" the world?
- I feel that having had COVID gives one the same or better immunity than a vaccine
- I'm young, female, had antibodies, healthy BH.
- Bec I had covid already
- I have antibodies from the virus
- Covid is a minor threat with some risks that we are collectively getting better at dealing with. Vaccine is still developing and may have risks too. Would rather utilize common sense prevention like social distancing n handwashing which are harmless than putting myself in experimental risk that's still ongoing. Not antivaxx and would consider vaxx after a long enough while of excellent results
- Like measles, once you have I might be safe for life.
- I'm not in a age group that is at risk of getting complications from COVID and frankly, I believe it isn't safe for anyone! I heard of many side effects including death. Not taking the risk.
- i have anti bodis
- I had covid as did my family. While an unpleasant experience, we all are doing fine now. Additionally, there are many treatments that have proven effective against the disease
- I'm at effectively zero risk from covid, and it's beneficial to the vaccinated too, as the vaccine's effect is best overall with around 65-70% of the pop vaccinated bec it allows covid to circulate among the vaccinated maintaining a high quality of immunity
- I'm healthy and young there is less of a risk in me not taking a vaccine I don't know about then the virus which I've had
- Personal doctor's advice, not random infomercial
- Already have large amount of antibodies for over a year.
- I'm young and healthy and had covid
- there are other more effective medicinal treatments, including hcq, ivermectin etc \* its NOT a vaccine (shame on YOU - don't be complicit with the known fraud!) its gene therapy and experimental and not even fda approved (only eua) \* there have been already MASSIVE side-effects (mostly censored from media and social media ETC) \* WHY ARE YOU (KNOWINGLY..?) PUSHING THIS AGENDA? funding? following the false 'data'/narrative? 'following orders'..? YOU should know better...
- Already had COVID
- Had covid, young, and also with many people still getting covid after getting it, and not knowing enough about it..
- I'm young and healthy. I haven't had covid19 in the full year it's been here (guess it's not that contagious) and I don't see it as a threat for those in my age group(30ish.) I can just as easily die from anything else. I feel the Media hyped this up from day 1 for ratings and fear mongering. Surprisingly, this past year no one died from heart attacks/diabetes/cancer/obesity/accidents etc. I know our community was hard hit and a lot of ppl died to begin with but bh we are ok. I also find our community has definitely achieved some sort of herd immunity as bh the majority of the community are not wearing any masks and are ok and are not sick bh.also, bh there are so many treatment options out there if I would get it,and I would ask for them.
- I have already had Covid, as per the studies that where done I dont believe you can get it again.
- I have antibodies
- I take prophylactic measures, vitamins and good nutrition
- B"H my overall general health is great. With the existing medical knowledge today, I believe that if I were to contract the virus and on the unlikely chance that I have a bad case, it would be properly treated.
- Because I'm young and healthy BH. We need to teach ppl to build up their immune systems Vitamin d,c ,zinc etc. There are meds that are being withheld from the public, like hydroxy, ivermectin etc which would've reduced the death rates by upto 80-90% . Their end goal was to force the vaccine on us, gov't sadly doesn't mean our health at all.
- Have high antibodies a year later

- I tested positive for 150 antibodies and so did my entire family
- All my friends and neighbors in my age group that got the virus had the sniffles/ sinus headache/ lost taste. my friends and neighbors that got the shot were sick in bed for a few days. Bcz I am not a high risk case, I don't fear the virus. I am up to date with all my kids and my own vaccines.
- I don't think I'm vulnerable enough nor a significant enough risk to others to compel me to take it.
- I am in a low-risk age group, and apart from my weight, I have no risk factors. I am working on losing weight. But otherwise I am very low risk
- Already had the virus
- I had the virus and I try to be careful and hopefully I'll be ok bezh
- I had covid already and I don't think vaccine helps
- Because I was very sick and Bh able to give plasma and a year plus later I still have my own antibodies.
- I haven't gotten corona yet, and my husband did, so I don't think I will catch it if I didn't catch it from him, and we were sharing towels, sinks, everything
- i had covid i am over it
- I already had carona.
- I recovered from covid...
- I don't fall into a high risk category and there are other treatments available
- Have very high antibodies
- I'm quite healthy. The numbers/percetnagne of ill and deaths do not match the level of hysteria.
- I had covid
- I already got Covid, so just like I don't take a chicken pox vaccine since I already got chicken pox I shouldn't need Covid vaccine.
- I had covid already
- I still have antibodies
- Cues I had already covid and the fact show that even though its after 12 months since I catch it I didn't got it yet and it's so far a 99.9% of ppl who had it 1 time didn't catch another time
- I have antibodies
- I am young, i eat healthy and take vitamin supplements when needed, there are many different cures that have been proven to be effective if used as soon as symptoms start, and trust i hashem gave me an immune system and if i treat it properly it will treat me properly!
- Because covid 19 is not dangerous to me, and if it was a danger I would take Hydroxychloroquine, zinc, ivermectin, vitamin c, vitamin d, quercetine, and do exercise.
- I am young and had the virus already
- i think i had the virus already
- the Flu vaccine has been out for about 15 years, as a medical worker I don't see that they have ever gotten the right strengths. people are still dying much more from flu then covid. the reason there were so many deaths is becuase of medical malpractice and the fear and fobia the news and the government has brought forward!!!!!! there was havoc when it was just like getting the flu, closing places making ghost town out of the country was one huge disaster !!!!!!!!!!!!!111
- already had COVID
- I have antibodies
- Its not a vaccine Its an experiment and I will not be a ginnie pig
- If Pfizer themselves claim that you will need a third shot why should I take when they themselves didnt figure it out yet secondly if the mask is so safe why isn't there permission for vaccinated people to fly or go to concert restaurants bars etc that alone tells me that the government dont trust it yet so I'll wait to get it till the government has more trust in it
- I had COVID
- I have had covid-19
- I am young and healthy. Also, covid is a hyped up disease. Look at the overall numbers of people who died in 2020 and compare to the overall number of people who died in previous years.
- Covid has a low mortality rate. And the vaccine is only 95% effective against severe cases.
- I am taking many supplements to build up my immune system and there is a high recovery rate for Covid.
- Because I had Covid.
- Covid-19 has a 99.9% survival rate for most people and 94.5% for people 70+. There are effective medications and prophylaxis for Covid-19. there is no reason for a vaccine. In fact, there is no FDA approved vaccine for Covid-19.
- I'm healthy. The mortality rate is minute. The risk is great
- I don't think its safe
- Cuz I had covid
- Antibodies
- I had a high nimer antibodies
- Have antibodies

- Young and healthy
- Because I had the virus and have antibodies. Also there are treatment options and ways to protect yourself.
- There are plenty of proven effective treatments for covid and the vaccine is not even approved, and many reports of those who were vaccinated and caught covid anyway
- Because I am young and healthy and will be fine even if I contract Covid-19.
- Still have antibodies
- because i have already antibodies
- I'm only in my 20s and Covid isn't a huge threat to that age. also, I'm not sure If I got Covid, But even if I did, then I got a super mild case so there is no need for the vaccine until I feel it is safe.
- I already had the virus as did everyone else around me. I feel that it is not a threat and there are available cures
- cuz i had it
- had antibodies in the past
- I don't think its so bad to get covid .... if I go to a Dr and they want to give it to me then maybe I'll take it if it doesn't cost
- I take care of myself. My vitamin D is in optimal range. I do not have comorbidities I take supplements against viral infection and I had the virus and it was literally a cold. BH.
- Already had covid
- Because I'm still young and I had covid
- If a person is healthy he doesn't need it especially that the vaccine doesn't cover all new strains
- I'm young
- had the virus
- I had the virus. I have developed antibodies. My doctor says that even if my antibodies numbers drops, my body will have memory cells to fight it if it ever comes again chas vshulem.
- Because i had Covid once already and having it a second time is as much known abut as the effectiveness of the vaccine...
- I already had the virus
- I had the virus
- i had it covid already
- Had covid
- I'm a healthy young person. I'm not scaerd to get covid
- Because there is no real evidence that any vaccines work, let alone this one which is a tool of the illuminati Their plan for us is to lock everyone is a digital prison

- I had the virus and have more antibodies then people who took the vaccine
- Cause I had covid already
- because if you had covid you have immunity to it and you have antibodies once you have it you should be good and if you take the vaccine it only builds more your antibodies but its not a different once you have antibodies
- I had covid. It's as good as the vaccine, if not better.
- I already had covid (so have antibodies) and I'm young and healthy bh
- bec. i never had covid & the vaccine causes covid
- Because I already had covid and my body healed from it.
- I think it's like the Flu
- I believe I can develop immunity on my own.
- i don't see a need for it It's not a one inn a thousand chance of dying from it
- I already had covid 19 a year ago
- Had covid
- I have already had covid 19- with antibodies
- Our entire family and the majority of our community had covid. It was mild for everyone we know.
- I've bh successfully fought COVID-19 in the past and Bh have antibodies.
- Because I already had covid
- Because
- Because noone needs this poison - it's a hoax.
- Had Covid and have antibodies
- I already had the virus.
- It's still not an approved vaccine, only approved for emergency use, waiting to see how it goes.
- Because I already had Covid 19 and I have antibodies
- I had COVID, and though I have very low antibodies, my physician said it is highly unlikely that I will get it again.
- I have antibodies. While it's true antibodies may not last forever, neither does the vaccine. It is extremely rare for someone who has the virus to get it again. I check for antibodies quite regularly and I still have.
- Young and healthy, under 30, I don't need a vaccine for something that isn't a life threatening to me
- Already had Covid. Don't believe that vaccine is better than natural immunity

- Because you still have to wear a mask after receiving the vaccine
- Because I already had covid
- I am young and healthy
- had the virus already don't think the vaccine can provide more immunity
- I have antibodies one year after having had coronavirus
- I had Covid and already have antibodies.
- Had covid. Taking the Vaccine doesn't mean u are immune.
- Natural immunity from the virus not proven to be less affective than the vaccine
- It doesn't help
- I have had the virus and tested positive for a high level of antibodies. I am also a young woman of child bearing age and I do not know what kind of effect the vaccine can have on my reproductive health, although I do assume it is safe, I would rather not take the chance.
- I believe in the immune system given to me my God. I don't need an "insurance plan" just "in case" Gods greatness fails me. I also don't believe in getting a shot for something that has a high survival rate & that already has different variants coming out as will be the case regularly going forward.
- I had covid
- With S spike antibodies 1000x the cutoff 13 months after infection/physical recovery and results that didnt disappear and only rising, I received my antibodies that are better than any vax,and will last a lifetime. Vax is less reliable
- Because I had the virus already and I'm still Young and healthy B'h
- Covid is not a risk for young people
- I had COVID already
- Since I recovered from Covid, I'm immune
- I don't believe in the vaccines safety and know from rabbinical sources to definitely NOT take it. Also do not believe in the covid pandemic
- I've had "covid" twice though I was never tested and I have anti bodies, being that I'm young and healthy I don't think I need it
- I had corona already
- Already immune
- It make dead
- I have the virus already.
- I have antibodies
- I have already had Covid 19
- I have no underlying conditions and in general people my age have recovered
- I had it and most people I know had it and it wasnt anything major. The common flu is more debilitating and I have had it so many times over the years and never made a big deal about it nor considered a vaccine. Any vaccine is a risk and I don't believe that I have any special health issues that would make me exceptionally vulnerable regarding covid the flu or any other virus that would warrant me to risk taking any new vaccine.
- Im Bh young and healthy
- I had covid
- I got covid recently
- B"H my experience with covid was not bad. I don't see why I should inject something foreign when it appears my body can fight it.
- i had covid therefor i should have a certian level of antibodies
- Had he virus in the past
- I already had covid and have antibodies. I have been tested 3 times over 9 months for antibodies and all 3 times it came back positive. Also I am 49 and take care of myself through healthy eating and exercise etc and most importantly I have faith in the immune system Hashem gave us for a virus that has such a high recovery rate.
- As of now looks that whoever had the virus can't get it again
- If I get corona virus I know what to expect. With the vaccine I don't know what to expect. I'm young and can fight off corona virus, I don't know what I would be able to do for myself if I had a bad reaction to the vaccine. The chance of a reaction isn't worth it for this virus.
- Bec I think with proper supplements, vitamin c zinc, vitamin d, hydroxy, ivermectin we can overcome it.
- I have antibodies
- I already got covid, and believe I can fight it again if need be
- I have antibodies
- I had covid19
- because i had covid
- Had covid
- I'm young. And I already had corona. And HaShem gave me an immune system
- After having Covid (confirmed) and in bed for 12 days and BH being able to fight it off naturally my immune system now knows how to handle this virus in the future. That is how the body works.

It fights off infection and then learns what to do for the future to keep the body safe.

- because i have had it already
- I don't think the virus is such a big threat, the effects of the corona vaccine are quite scary to me
- I am young and don't think corona will effect me. In regard to transmitting to elderly, I believe that as long as we can keep the hospitalizations low then covid is not more deadly than any other virus. Covid may be here to stay, and just like the flu vaccine, we may be guessing the next strain for years to come.
- Had corona already
- I already have antibodies
- The fact the the Government and Media pushed the vaccine when there are affective ways of treating Covid-19 such as the Zelenko Protocol made the vaccine seem "fishy".
- I had Covid and checked for antibodies, which I have. I don't think there is a need to get the vaccine if I already have antibodies. If I had tested negative for antibodies, I probably would get the vaccine.
- I had COVID 19 right after Purim last year , took hydroxychloroquine in the beginning, no complications Bh, recuperated nicely and have antibodies
- Because I am young and I have antibodies.
- I had Covid and in young
- I'm healthy
- I have antibodies
- Because I help people with COVID all the time and there are MANY therapuetics that work!!! If treated early and correctly -- almost no one would die or have side effects. I see this ALL THE TIME
- Covid is not a threat
- I don't believe covid is worse than the flu.
- I have developed antibodies that so far b"H are still in the system
- I had the virus. Same way i had chicken pox. Dont need the vaccine.
- I had COVID and currently have antibodies
- Natural immunity is better and more long lasting than immunity from a vaccine we don't know much about. I believe there is way more to our immune systems then just antibody count. I believe the media is lying to keep people scared and take the shot.
- Bc I rely on my immunity and don't need to inject chemicals into me
- I have antibodies already.
- I have anti-bodies. 2. the vaccine is not approved yet it is only for the emergence I do not see an emergency now even you see some cases however it's with very little deaths
- because im bh young enough and i think my body can fight the virus itself.
- I have a high antibody count.
- I had covid. I am healthy. Covid is not a threat to me or my family.
- I have antibodies that continue to increase in number over the last year
- I've had the virus already and dont think I should take something with high risks for a virus that is not so deadly and the media is making it and there are plenty treatments out there
- Alternative early treatments are highly effective to treat corona
- I had the virus and developed natural immunity. For those who argue that the anti-bodies fade and therefore one is no longer immune. First, reality shows most people did not get reinfected although being exposed to the virus again. Additionally, how do the know that the vaccine provides better and longer immunity?!?
- If G-D's antibodies are ineffective, human developed ones are certainly not.
- THIS VIRUS IS TREATABLE. we NOW have various ways to treat this virus. Why should we take part in an EXPERIMENTAL vaccine ?? the only group I'll be a part of us the control group. People say oh take it bc we don't know the long term effects of corona and it could be ScArY. To that I say- we don't know the long term effects of this vaccine and they too might be scary. I place my fate in hashems hands. if I'm going to have scary side effects let me get corona and find out . My inlaws both overweight, Both had open heart surgeries in the last two years and one has diabetes both got corona and got the monoclonal treatment and beat the virus: this is treatable. We do not need to be test subjects.
- I have antibodies
- I am young and not in an at- risk category. If I were to get covid, I know how to treat it. You are statistically more likely to survive corona by following Zelenko's protocol. We have safe treatments already so no need for experimental products.
- i dont think all people should take it, only the ones at risk.

- I had corona so I have antibodies. Also there are many other easy and cheap treatments available like ivermectin and HQC!
- At this time because i already had the virus & because im young and healthy bh i don't think i need it, but maybe in the long run i might need to get it
- have anti bodies
- I think that i don't need the vaccine because I already had the virus and high antibodies and believe that my body is healthy enough to fight the virus.
- I had covid and have antibodies
- Cause I'm young and healthy and didn't get COVID till now despite not being careful, and never stopped going to minyan
- I had already the virus and I had recovered perfectly, I'm still young and I don't believe that it is required for me to take it.
- I am BH a young and healthy person!
- My doctor told me I don't need it as I had antibodies
- I'm young and imuned
- My doctor are knowledgeable in treating covid with IV therapies and other treatments that are safe and proven effective in his practicSupporting immune funct
- I am BH a young and a healthy person!
- I am not in the age group of people who COVID can be dangerous for- there is a 99.9% chance of survival at my age.
- I hade covid already
- The medicines we have are safe and effective . Ivermectin, hydroxy, asthma medications , supplements
- Have antibody
- I already had covid and I still have antibodies. I have not heard of reinfection and a Dr that I respect said he has not seen any cases of reinfection either. I believe our bodies need to learn how to fight off certain things on its own.
- I already had Covid and I'm healthy
- Had the virus
- I have antibodies
- I had the virus and vaccines against colds are worthless. A new strains is here every year.
- Because I believe that Covid is generally not serious and that it is better and more effective to acquire immunity naturally than through a vaccine that has very questionable effectiveness especially when it comes to transmission.
- For me, I'd rather get it, fight it, and form a stronger immune system by naturally fighting it. I don't think the same is true for many people due to various health problems a person may have.
- I already had the virus and I developed antibodies and I don't think the benefits of taking the vaccine at this point over way the risk of putting a foreign substance in my body
- im a generally healthy young man and dont think that coronavirus is as dangerous for me if i got it
- I already had Covid. I should be immune from it now. There are good natural cures that don't cause negative side effects. It has, on average, a 99.7% recovery rate with practically no treatment. Those who die from it (Heaven forbid) are likely to have died from any virus (again Heaven forbid of course). How the mRNA vaccines work (from Pfizer and Moderna), by definition of how they work, will cause auto-immune diseases (Heaven forbid).
- Because there are medications, that if given as soon as someone gets the virus, will cure the virus. Vaccinations are not necessary.
- because i am under 40 in good health and have antibodies
- I think the covid 19 is fine if I get it, therefore there's no need for a vaccine
- I am in my early 40's with no comorbidities and there are treatments for covid that actually work to cure COVID even for high risk patients. I'd rather use medications and natural treatments to cure COVID that have worked for many people that I personally know then to use an experimental injection that has no long term studies and has only been authorized under emergency use. It would only be mentchluch if when you send out emails to the frum community that at the very least you inform them that these vaccines are at the experimental stage, instead of telling them they have proven to be safe and effective. It has become more and more apparent that these vaccines are not safe nor effective. They also do not stop you from catching COVID or transmitting it to others. This has been admitted by Dr. Fauci and Pfizer themselves and is becoming very apparent by how many people are catching Covid after being fully vaccinated. It is extremely frustrating to be constantly badgered to take an experimental shot that has no proof of having any benefits at all and has actually caused damage to many people

- I was sick last year and still cannot smell. I spoke to several doctors who feel that since I was sick there's no need to get a vaccine.
- Because I'm a healthy adult that can make a decision about my own damn body. There's a 99% survival rate for my age group and 94% for ages 70 and up of whom I don't NEED TO TAKE CARE OF. My only responsibility is my body. Get out of my body thanks.
- I am more focused on lifestyle, I am not worried about getting a virus at all.
- Young, healthy, already had covid, excellent treatments available in the event i get it again.
- 1.I had covid already and assume I have antibodies
- Because I had covid!!! And they are not safe!!!! Too many side effects.
- There are a good few effective (hidden and denied) treatments available when treated early enough. The unknown risks of the vaccine are huge! We are being fooled to think this is about our health! With nobody talking about building up our immune system so we can handle the virus. Follow the true science! And stop the fear mongering and worship of the vaccine.
- The recovery rate is above 97%, these vaccines are showing more and more negative effects including most recently on people who have not gotten the vaccine . The censoring of medical professionals as well as prohibiting open discussion on it, contributed to my distrust of this new bio technology. It had never been proven to be safe and effective
- Let others who need and want it get it- I am a medical worker and was offered it back in December but declined.
- I have had covid 1 and have antibodies. I am not sure the vaccine will improve on that. I would like clarification on which vaccines are best for older people who already had covid. How long does immunity last? i f so I would act accordingly. Things are still unclear.
- I already had covid, and studies show that the b-cell and t-cell immunity should be pretty long lasting. I'm young and have no comorbidities Statistically, the odds of dying from this disease, given these circumstances, are very tiny.
- the risk of taking it is bigger than the risk of getting covid a second time...
- The recovery rate for covid is higher than the efficacy rate of the vaccine. The vaccine does not stop transmission. If you would have read trial you would have not have asked this question...
- I am a young healthy adult and bh feel strong enough to fight the virus if necessary, take vitamins to boost immune system
- 1.It's a virus with 99.97% survival rate, with 98% of people in my age group only develop minor symptoms. 2. The vaccine has not been approved unanimously even as an EUA. 3.corona virus is a RNA. virus with an envelope and it will continue to mutate 4. In previous studies of the SARS vaccines the ferrets developed odd cancers over time. 5. 30% of the ferrets died after showing high antibodies, still died from SARS. 7. The efficacy numbers are are not accurate, since by the time the vaccine came out the death rate from COVID was already done by about 80%. 8. With that said Stay healthy
- I had covid already
- The risk for my age is very low + In worst case there are treatments out there, although not recognized by medical establishment
- Im young and healthy and ive already tested positive for antibodies twice without the levels really going down. Since the manufacturers of the vaccine say we might have to take it anually, i dont think i need it for now as long as ive got natrul antibodies.
- I have antibodies, and even if they wear off at some point, I'd much rather take my chances with a known virus that has a 99.996 percent chance of survival than to inject some unknown substance which is designed to mess with DNA which has only had limited field testing, and comes with many documented cases of deaths and severe side effects.
- Because I had covid already and Baruch Hashem I am young and healthy.
- I had it and have antibodies
- I eat well, am not overweight, exercise, take supplements and don't believe if I get a flu, it is a catastrophic event.
- I had COVID and recovered and had antibodies
- I already Had COVID
- I already had Covid
- I got covid already
- I had covid
- I am 39 years old. The risk of dying from covid is miniscule.
- Young and got it already
- I am done with Covid.
- I had the virus

- I'm under 30 years old, and there are already effective treatment options readily available.
- Age, overall health, conscious of Vitamin D levels
- Have antibodies and I believe that will serve me well in future even though cdc wants me to think otherwise in order to get vax. I trust my bodies immune system and take care of it well to prevent getting sick.
- becuse i had coivd
- BEC I WAS TESTED NEGATIVE FOR COVID-19
- why yes? i had covid and im healthy b"h
- I am healthy and have alternative safer solutions than a vaccine that has never been tested for long term side effects.
- My doctor and many other doctors have told me that having antibodies at any point is enough of a protection.
- I have natural immunity
- Have antibodies
- COVID 19 is treatable
- I have antibodies
- I have high antibodies
- Had COVID and I have antibodies
- There are safer effective forms of treatment such as ivermectin
- I got covid already. I am 22, didn't get it bad. Low chance of getting it again, even if I do it won't be worse than last time.
- I already had Covid, I have natural immunity. I have been exposed to Covid many times since, and did not get sick. My natural immunity is just as effective as the vaccine, without the potential side affects. The only reason to take the vaccine is to satisfy the leftist agenda. There is no heter to take a vaccine just for political reasons. All those pushing the vaccine, including the "frum" organizations have an either political or financial agenda.
- I have had COVID I am generally healthy There are now treatment options available
- I believe that I'm already immunized because I had it, so I don't wee the need to get it.
- I'm young and healthy and had COVID-19 already and I have antibodies
- I am 33 years old and believe that should I become infected, I can treat myself properly to overcome it.
- Already had the virus and tested positive for antibodies,
- I already had covid, and besides the point, I am only 40 years old. I do not take flu shots ever, for the same reason - I am still young.
- I am young and did not get effected by the coronavirus when I had it. I would rather not get some adverse side effect or get a new vaccine when there is no need for me personally to get it. Maybe one day the circumstances will change.
- I am young and healthy and created perfect by Hashem
- I've heard From some doctors I have spoken too That ultimately it will be like a flu and even after antibodies wear off you ones body will still know how to fight it
- I had a bad case of covid & I believe natural immunity is best immunity. I also believe in taking steps to boost my immune system like eat healthy, do exercise, socialize & take vitamins. Even if I do get covid again I'm confident with drugs & natural remedies I can fight it.
- Antibodies
- I'm young, and I had covid with very few symptoms. Considering that I have antibodies and there is an element of risk in taking a new vaccine, I would prefer to not take it unless I absolutely have to.
- I am young and healthy and I already had the virus. Also there is already easily available effective treatment options (Only in hospitals that actually care to save your life rather then add another covid casualty to their count)
- i had the virus already also there is a lot of medication out there to help even i get the virus and also i am in the low forty's and usually even you get the virus at this age its not much of a big deal
- I had covid with very minimal side effects. Not afraid of covid personally because I'm young and healthy (even though my father who was 70 died of covid).
- i have antibodies at the moment, so I do not need to get a vaccine that will give me artificial antibodies. no one has come against this train of thought, all I hear is vaccinate vaccinate all day long, but no one including my doctor has given me a good reason to vaccinate. traveling is not a good reason to inject myself with something that is so new and the effects not yet known. to get the board of health off the backs of my husbands yeshiva and my childrens schools is not either a good enough reason for me to vaccinate at the moment.
- I am healthy BSD, and I know many many people that were treated, (not in the hospital setting,) and were pretty sick. The doctor's

unconventional treatment almost always is effective, obviously with help from above.

- Because I had it already and it's a small chance I'll get it again. It's also a small chance of getting it after the vaccine.
- I have not gotten the virus bh until now. If everyone else is immunized and is protected then i dont have to worry that im passing it on. and if everyone is immunized and cant get it, then soon corona wont be here anymore so why do i need the vaccine!
- I have antibodies
- Why take a product that was not it proven that the benefits out way the risks. Just promises from Fauci...
- I got COVID and I am a very health conscious persons and my immune system is very strong
- I'm young and had the virus
- Covid was never a pandemic ,true some ppl got really sick from it but they were lacking the right care and even if we say they got the right care but still dyed the numbers are still not high enough to call this a pandemic this vaccine is not approved it's only EUA this was never an emergency and there was always better ways to treat covid so this vaccine is not worth the risk!
- I'm young and healthy bh! I already had covid, so I have antibiotics. There's no need for me to be part of an experiment if my risk of dying is less than getting struck by lightning
- I had Covid in Feb 28, 2020 to March 12, 2020. I have a high antibody titer which has lasted over 1 year (contrary to the suggestion of the medical establishment that it lasts only a few months). If I should get another strain of Covid, taking doxycycline hyclate 20 mg. 2 X per day will ensure that I will not get a cytokine storm, and Covid will merely be a nuisance. This is true for almost all people.
- I am not high risk, and I am young. Anyone I come into contact with that is of older age or in a risk category I will happily wear a mask or they are vaccinated. If it becomes a requirement to have the vaccine I am not opposed to it totally, nor am I opposed to people who are at risk of Covid 19 getting the vaccine.
- Heard immunity
- I have antibodies
- I think it is best that the body naturally immune to it. since there's a 99.9 % chance of recovery.
- From the beginning I read a lot and realized that HCQ and Ivermectin, Vit D and Vit C were

effective against the virus. The fact they were banned all over showed me the gov't and its string-pullers wanted people to die from the virus and were pushing everyone to lockdowns, masks, vaccines, etc. Lost complete trust in anything they tell us.

- Because so many ppl didn't even get affected when they had covid
- I had covid minor symptoms
- This is gene therapy for depopulation. You have to be a sheep to take it, sadly.
- I had Covid already. The best immunization.
- I'm young and healthy bh with antibodies.
- I am a healthy 39 year old. Most ppl that died or were hospitalized were overweight or obese. We need to change our community's diet and lifestyle. We do not need a vaccine.
- Because it has a very high percentage rate of survival and there are ways to treat the virus, like hql, vit d, etc...
- I have been actively, consciously building immunity for quite a long time. b'ezras haShem.
- Because I am extremely careful to take care of myself and my G-d given immune system.
- Bcs I already had the virus
- got enough antibodies
- I've already had covid and believe that getting in shape and cleaning up my diet is a better defense
- I have already had corona. Research shows that immunity against reinfection lasts far longer than scientists originally believed. I am also not in an age group to which coronavirus poses a serious health concern.
- Had it in March 20 ,tested for antibodies had some in June then I was caretaker for mom and was very exposed . Been exposed many times after. Strange though when came in contct with someone that had it ,I askd him to lve bec. my head startg hurting! He was postv! .
- I have Antibodies - the fact is, since the beginning of April 2020 After I recovered from The Virus I am being Tested @ least Twice a week ( I work in a medical facility) & the results are negative BH - thru all these months while Attending to shul Weddings etc.
- I am young and healthy
- I already had covid
- I HAVE HAD COVID AND HAVE NATURAL ANTIBODIES
- if herd immunity is achieved than i don't need it
- I already had COVID
- I'm recovered.

- I am not afraid of getting COVID
- I'm generally a healthy person. I don't take the flu vaccine either
- I had covid already.
- I M young and was around people with covid a few times. Did not present symptoms once. And I'll allow everyone else to get it and prove that it's safe, then ill maybe take it
- I had my blood tested in March and I still have antibodies.
- nobody does b/c for 99.5% of the population, the risks of getting covid and dying are smaller than the risks of taking the experimental shot and getting complications. Most healthy people, if treated effectively and kept OUT of the hospitals, survived covid in a time when it was much more rampant and dangerous. I feel the threat has largely passed due to herd immunity and the risk of covid is tiny. Anyone who might be in danger of getting covid should be careful, but their comorbidities/age put them in the greatest danger category for an experimental vaccine as well. Hashem gave us the virus, and the natural means to fight it and become immune to it. And besides all of this, the experimental vaccine isn't even effective, so why risk it at all.
- I had covid already
- I have anti bodies
- I am young, healthy and already have antibodies.
- i had already the virus. & you can see in our community that people don't get it a 2nd time, so why should i ?
- age 21
- I have been had 2 positive antibodies tests 10 months apart
- i had covid and was not to sick. and today their is more help if you need it
- i have antibodies.
- Because I had covid already.
- I am young and bh healthy
- I have anti bodies and I am young and heathy
- because I dont know the effects of the vaccine and I have antibodies.
- I already had corona so I am immune already. Why should I still need a vaccine?
- I live in the Holy Land. God protects me.
- i'm afraid
- have anti bodies
- We had the virus and are just fine. It is completely played up in the media. False information is being spread around and there's pressure to take it just because everyone else is.

That is not a reason to make a proper medical decision. There should be much more focus and emphasis on healthy lifestyle and healthy eating and natural prevention and treatment. There are medication's out there that people can use if necessary but there is no reason to inject an experimental shot for this reason. False information is being spread around and there is pressure to take it just because everyone else is. That is not a reason to make a proper medical decision. There should be much more focus and emphasis on healthy lifestyle and healthy eating and natural prevention and treatment. There are medication out there that people can use if necessary but there is no reason to inject an experimental shot for this reason

- Have antibodies
- Covid isnt a threat to ANYONE if treated properly. Start promoting vitamin c , d and zinc. Promote good health , exercise etc.
- Because I'm not at risk
- scared of needles:) I am b"h young and healthy so I think the benefits don't outweigh the risks
- no proof whatsoever that it gives better protection than someone who already had it
- I had COVID-19 and had antibodies.
- I have antibodies
- I believe god gave me an immune system that works. I think that this virus may need to organically pass through the population. Trying to control it is futile we see this by comparing states with lockdowns and those without
- Because 1. I had it already. 2. I believe that most healthy people at this time could fight it. And the hospitals are more prepared and know more so they can treat the patient instead of ignoring or letting people die due to negligence
- Had the Virus. Continue to have a high level of Antibodies.
- I believe like any other virus anti-bodies from the virus itself are enough to consider the virus non-life-threatening.
- I had the virus already
- Because I'm a young person, and I'm healthy, and there are a lot of - both natural and medical - prophylactic medicine to take for prevention of the covid-19 - and all other corona viruses, so why do I need it for?
- Since I'm Young and healthy (female) AND have tested for antibodies, (However about the older and ones at higher risk I think differently)
- I am only 21

- I already had the virus
- I have antibodies.
- I had Covid and have Antibodies
- I am young.
- I had the virus the same way we get every year any virus that goes around, I'm young and B"H healthy, "and as we saw the covid 19 was unpreventable sent by above, so to now shift my view that we could do things about covid is basically we didnt get the message from above, the one message from above is Teshuva... Thanks for giving me the place to bring out my feelings..
- i recovered
- because there are very effective treatments if used early as I & so many others have used very successfully plus there are so many scientific study's to prove it but pharma wont make enough billions so it gets suppressed by government & media
- I had covid
- <https://reut.rs/2OXf4SI>
- I've had the virus already
- I have antibodies
- have antibodies
- Because i had covid as did the majority of the people I know and the majority of people recovered
- I had corona last March. I had over 200 antibodies then. In the summer I had over 100 antibodies.. Now I have over 100 antibodies again as per a recent blood test. By the way I heard (I don't know if it is true) that the shot prevents having children.
- I think the vaccine is more dangerous than COVID-19
- Because i had already Covid-19. and if they say its needed for other new strains etc, nobody even knows if its affective for the new strains...
- I had a serious case of it, & I know that many people who had covid became really sick from the vaccine.
- I've had the virus and tested positive for antibodies 3 times, most recently in March. Spoke with my doctor who did not recommend the vaccine.
- Had Covid-19 didn't see any 'prove' that vaccines are 'more effective' and don't feel getting covid is more risk for 'me' to need a vaccine.
- Why yes? I'm not concerned to get covid
- I was exposed many times,(by my own husband and others) I still don't have antibodies, so I think I'm immune.
- I believe the vaccine is more dangerous then the disease
- I have anti-body's
- HAD THE VIRUS AND HAVE ANTIBODY
- Already had it, and not in a high-risk category.
- I had it and there are things more safe that are more effective
- I am healthy and have a 99% chance of recovery according to statistics from CDC. Also there are many therapeutics which have proven to be effective if used in a timely manner which can bring recovery to a near 100%.
- Because I had already the virus
- have antibodies and im young so covid in essence is not a personal threat
- I'm young and healthy. No reason for me to take the vaccine ill only take it if i would be required
- Because I had Covid
- Many reasons, mainly it doesn't make sense to me based on benefit vs. risk analysis. My personal experience with viruses has been ok. Example: As far as I know I have never contracted the flu, even during years when it was rampant around me. Even this virus many, many people around me have contracted it, yet I have no antibodies as of yet for this virus. In general I am not the type to buy extra insurance when renting a car, in case I need it... so here I don't understand why I should inject stuff into my bloodstream that may help me in case I get a virus that may affect me, likely not at any dangerous level.... And if I get injected it may or may not protect me for some variant of the virus, which not sure for how long.... and many others reasons, too long for me to write, right now.
- I'm afraid it won't work out
- My chances are over 99 percent effective of being fine. No reason to get myself sick or from a vaccine for a few days just to not get sick.
- Believe I already had the virus without symptoms
- I had Covid.
- Healthy and Young B"H
- Had the virus and survived. It is entirely possible to treat naturally. We should always look to treating naturally with the tools that Hashem gave us before injecting foreign substances with toxic ingredients
- I am young and healthy
- I have already had the virus
- if the only thing the vaccine does is giving you some of the virus, why should people that had already the virus take the vaccine?

- Why yes???
- Already had Covid.
- COVID-19 is usually not dangerous, and I'm young and healthy.
- Already had covid-19, and I am still in the young 20's
- Because I had the virus, have antibodies, and I don't feel like there's enough proof showing that I DO need it so i will hold off until proven otherwise.
- I had covid
- I have antibodies.
- I already had covid
- The mortality rate for for young healthy people are virtually 0 so there's no point for me taking a vaccine for it even if it's safe and affective
- I b'h have antibodies and the whole situation was blown up especially for young and healthy people. And there's b'h other effective treatments for covid for example hydroquinone, plasma, if someone does get it a little stronger.
- I had corona, I had antibodies infusion
- I have antibodies
- Cause I have already antibodies.
- natural anti bodies
- I had covid and was later exposed to covid and did not get it again.
- I feel the major threat is over
- I am young I don't have comorbidity I wear a mask all the time in public areas and stores
- I had covid, and for the slight chance of reinfection i'm not concerned bezras hashem
- I'm young and healthy BH
- I had Covid 19 and still have antibodies. My doctor feels I do not need the vaccine.
- Because I'm currently immune and when I lose my immunity, it won't kill me to get a little sick.
- Had covid
- I have been exposed to many ICU level patients without proper PPE and nothing has happened.
- I have antibodies
- According to CDC 99.9 survive
- I had Covid.
- I asked my doctor and he said I don't need it since I have antibodies even after 1 year. I'm young and healthy. I'll ask him again if I know I don't have antibodies.
- Young and healthy and have antibodies
- I'm young and strong and have anti body's
- I am young and healthy and want really affected when I had covid.
- I already had covid and I am young. Being that I am wary of its safety I feel like I'm better off without it.
- I have antibodies.
- Although I was weak and sick for a number of days, I recovered, and don't think vaccinating is worth the risk
- Already have antibodies
- A virus that has a 98.9 survival rate doesn't need a vaccine
- Because who said it's effective
- Young and healthy and I have an immune system
- since I already have the antibodies
- I'm not in a high risk group, and I already had (an extremely mild case of) Covid.
- I'm young and healthy and feel that if I get Covid I can fight it naturally
- I already recovered from corona
- I had the virus
- I have antibodies
- I already had covid, and I have anti bodies
- Because I had it
- I had covid and bh recovered
- If I had Corona, why do I need a vaccine? Do you give a chickenpox vaccine to someone who already had chickenpox?
- Other like other vaccines (which I do take) this was approved very quickly without any proper testing, and there is side effects as well and I'm A healthy young man that bh have a strong immune system which there is not need to put myself in something that there is even a %1 question about the safety of it
- I had covid, I'm healthy and under the age of 30
- I had covid already I think I'm covered
- I already had covid, which means my body naturally knows how to fight it off.
- Cause I had COVID already
- Risk/reward. Covid had treatments and effect a small percent of people vs a non-FDA approved vaccine that we just don't know enough about.
- Colloidal silver, D3, Zinc, lots of VitaminC, Awareness and utter distrust of those with an (eugenics) point of view who have invested in it, Massive conflicts if interest of gov't w/economic interests, bullying & total absence of transparency
- I have antibodies and I trust my body
- because data of deaths and hospitalizations of the past year has shown that if you are not old or sick with any other conditions you don't have to worry.

- I have antibodies, and I'm young and healthy.

**What else would you like to tell us about the reasons why you will probably or definitely not get the vaccine?**

- Too much power/control on the people, wearing masks, showing vaccine card
- Right now I am on a steroid and for now was advised to wait. I have nothing against the vaccine and hope to be able to get it soon. I'm afraid many others that are anti won't even take the time to fill this out. But I appreciate this very much.
- At this time I will not be getting the vaccine as we still know very little about the possible side effects that may stem from the vaccine, long-term or short term. It is of my opinion that everyone needs to ask their Dr & religious leader whether they should take it, & it should be decided on a case by case individual basis.
- Being that I already had covid and I'm in no rush to get the vaccine perhaps new years down the line in the future as more people get the vaccine and more information the research becomes available I will choose to get it then, but definitely not at this point where it's just two new
- Because there is no long term study on it and its political motivations
- Its on halter and dangerous
- Not sure if i got Covid right away last year after purim. Got pretty sick then, but never got tested, and it's over a year since then, and I've been around so many people everyday without a mask and BH never gotten sick, so why take a vaccine?
- No point if you had covid
- I don't think it's safe
- It's all political
- Also looks very political.
- Doctor Zimmerman said that it's not safe
- Only time will make it more reliable, same as all other vaccines.
- I never had the virus, and I'm really afraid of side affects. I had spoken to my Dr and she told me after getting vaccinated, she wasn't sure she will survive the next day.
- Had covid already
- I will probably be getting once it will be approved by the CDC (but not when it's only emergency approved)
- For me, the longer the wait the better. Definitely don't think it's an end all solution yet, especially given new strains. And since I already had covid, I assume the antibodies I have are better than from the vaccine.
- As long I don't see covid as a threat to me cuz I'm young and healthy I don't see a reason to get the vaccine.
- Main thing is to wait it out , everyday there is new information coming out. J&J being a concern & Pizer needing a booster etc.
- I have no reason to get the vaccine. I'm not scared of getting covid again.
- Because its agenda driven. No factual data. People are enriching themselves on our behalf.
- Not tested in regards to pregnant and lactating women, and the effects on fertility
- I had covid already so I am naturally immune. Risk of covid for me is less than the risk of vaccine. Even though I am reasonably sure it is safe and effective, why take a chance Now? Wait until full fda approval. If I was over 70 and hadn't had covid yet, I would certainly have gotten the vaccine
- I will wait a reasonable time to see the side affects and what benefit I'm getting for taking it
- Anti body remain there forever.
- The virus is too new to know the full scope and if it will come back as strong , as of now it doesn't look like it was like all the other extremely dangerous diseases we had
- If you took the vaccine you may be entitled to compensation.
- I have antibodies so there's no reason to get the vaccine!
- Look at the j&j and tell me why I should
- The way the vaccine is marketed and coerced (in many places the % vaxxed is the condition to get your freedoms back). Also the yoyo we've experienced with this whole thing the past year and a half takes away every single bit of trust we had in the government
- Cause you're pushing for it, tell me how much kickback money you got for this???
- Sadly, much of this has become political & I simply don't trust what we are told. I think this has been overplayed for political purposes
- The virus changes. What's the point?
- Waiting for more people to get vaccinated
- I believe having had covid there is immunity
- Too much politics involved with the Pandemic. I don't trust most of the information regarding

current threat level of corona and effectiveness and safety of the vaccine because of the above.

- If I have antibodies to covid19 why would I need the vaccine? Same idea like chickenpox, measles, mumps, polio. Etc.
- Made to quickly and there is so much we can do to treat Covid now there is no reason to inject something in my body that "might" be effective
- I have antibodies
- Don't like things I'm hearing and seeing about it
- I think it's about money and control
- Science used to tell us that having the actual illness is the most effective way of getting antibodies. Why has this changed? And why are people who were deathly ill still advised to get the vaccine?
- My blood test recently showed I still have antibodies for COVID 19 virus.
- Mother forbade me from taking it
- I heard of people getting very sick or died after getting vaccinated
- Never believe something not researched at least a person's lifetime (95+ years) , and Never trust people with own interests especially when the interest has alot of money involved
- Cause I had coronavirus already Don't feel a need to take vaccine
- It should never been mandatoried
- Already had COVID.
- Vaccines are new and research is limited. Some studies suggest it is fatal.
- Fertility concerns
- The rebba told me not to get it and I don't think I need it since I had rona already
- On the fence about the vaccine, have to wait to have more info. I'm nervous about long term side effects and issues it can cause in the future in regards to pregnancy. Also, believe Covid has become political and is not as a threat as the media, politicians, and US gov. make it seem. And lastly, this vaccine is not a mRNA vaccine but a gene vaccine
- I don't know that someone who had covid-19 still needs a vaccine.
- Too much bad feedback
- All meds is always tested on animals for years.... Now its ok to have the vaccine in place in a few months times and is being tested on humans? Why is the govt pushing so much to have everybody take it or else....
- We long I don't need to fly I will probably not take it the vaccine if I need to leave the country and will need to be vaccinated I will take it
- I'm not against it, just don't feel the need for it. Also not clear if you can't carry the virus after being vaccinated. If I could still carry it, then what's the point?
- I might need one to enter a foreign country or other political reason. Then I would get it.
- If I won't be able to fly without taking the vaccine
- I dont feel it's necessary due to the fact i has covid already amd therfore even though it's in minute risk I don't feel it is necessary
- My doc did not give the ok yet
- Not tested enough, no underlying health conditions B"H
- I was exposed several time to COVID but I never got it and I have no antibodies I do not think that everyone can get the virus
- Scared of the long term effects
- It's still an experiment
- Don't believe in the way it is being forced onto us. Don't believe it's that effective and believe it's mostly political and money making Don't believe in it due to having to wear masks after and still obeying covid rules AND heard personally of a few case where someone took both doses and then got it anyway and pretty bad
- I'm scared of the side effects and before a few years you can't know what the outcome will be
- See the comments what I wrote before,
- I'm very scared of needles.
- The main reason is because it's being forced upon us.
- Not enough information yet
- I have antibodies I dotn think the vaccine has more lasting immunity then covid itself And 2ndly if I know this is the last and only time that I'll need to take it, I would consider taking it Now I hear that they want to give it every year Now thats nothing related to the current corona situation Thats also y I won't take it at this time
- I might be allergic to the vaccine (I have an allergies history)
- I think i made it pretty clear. Will you also share the dangers of vaccines?? Such as for ppl who already had covid or for pregnant women...?? Or it's only important to convince EVERYONE that it's safe?? We know you have big corporations sponsoring this vaccine agenda. Enjoy the money!

- Unknown long term effects and effects on childbearing (this is not based on false WhatsApp rumors about fertility, rather based on lack of extensive testing throughout the pregnancy/nursing/fertility cycle). Once they have gathered more evidence over time that the vaccine is safe on this population, I will have no problem getting it.
- I took the MMR a few times and my blood work shows I'm not immuned I'm afraid the same will be with covid 19 vaccines
- Why is it that the ebola vaccine took so long to get APPROVED in 2019 which is much after the December 2013 to January 2016 outbreak as opposed to the Covid vaccine which got approved (emergency use authorization/not approved) in record time.....
- Unless antibodies drop or Covid remains a long term threat, why yes?
- Right now there is a limit of vaccines, give it to those that need or really want it. And it is still an experiment.
- There's no need. I have antibodies. Besides, the fact that Pfizer now says we need a third shot to make it work just proves how silly this entire matter is.
- Bh having covid with comorbidities there was treatment .no need for a vaccine that has a higher death rate than the illness itself especially when there is treatment
- I strongly believe that there is a lot of politics involved and the truth is not told to the general public
- I had covid. If it turns into an annual thing, like the flu shot, maybe I'll get it. But for this round I'm ok
- The government shouldn't be forcing people. If anyone is afraid of covid they are more then welcome to get it themselves
- Already had Covid, not very concerned about getting it again, as more people get the vaccine we will reach herd immunity and Covid will be over
- This vaccine is severely dangerous!! It is not a vaccine and was never intended as a vaccine. It's a Bio-Weapon! Shame on all the Askunim that promote something so dangerous. I believe in Hashem. Askunim these days are worse than the Judenrat!!! Hatzolah has NERVE to promote this Covid Vaccine!!! Who's paying Hatzolah for advertising? Always follow the money!!
- There's no evidence that it's completely safe and wouldn't make any harm for the future.
- Really scary to the point of control the government has.. and blocking even medical professionals that dare to differ.. who is not awake here?
- I might take it, but not very soon. I'll rather wait a while and see how it works out.
- They need more research
- I believe I have antibodies
- Safety-the fact the studies required frequent pregnancy tests for participants is a red flag and I would like to have children one day. Isn't natural immunity better than artificial immunity?
- Zero trust in govmt and the "experts". They would rather see ppl die (banning HCQ) to further they're agenda.
- I don't think I need it , I had a heavy case of COVID and got high antibodies and even checked it twice since then and still have high antibodies
- I don't trust WHO & the CDC. There's some major corruption going on behind scenes & in the hospitals too. I know that cuz my father almost died in NYU from corona & was in a coma for almost 6 months. The hospital almost killed him. B"h he's alive but has like a hospital in his home now & aged about 50 yrs.. I saw firsthand how we can't trust the hospitals & they don't really mean the patients well-being. Even now that they don't let a patient have a close one at his side during the evening & through the night & barely any visitors (what about anyone that has 12 kids & all children want a chance to see him/her? It's not safe letting anyone go to a hospital these days. They are better off having a 24 hr nurse in their own home with a trusted private Dr. overlooking their health.
- Its horrifying to see these vaccines being tested on humans. People just don't know that they are the ones being experimented on.
- I'm pretty pro-vax, I even get the flu shot most years. But I don't trust anything coming out of the government these days, and the vaccines were developed very fast. Who knows what side effects develop later?
- Been around too short to know side effects
- I don't believe anyone has our best interest in mind when it comes to Covid actions. I do believe that there is a lot of self interest on the part of government leaders and drug companies who have proven to be ruthless in the past.

- Having adverse reactions to covid is scary. Having adverse reactions to an experiment that i have singlehandedly put myself into is still scarier. I think the vaxx is a decision ppl should research and hopefully receive 1000% transparency, some in my family took it and i fully supported their choice, however I'm not confident at all in the miracle of this specific vaxx, tasteless ads of kriyas yam suf notwithstanding ☹️
- In general I get vaccinated, but this vaccine was rushed to completion. I hope that more adjustments will be made Goethe safety of the vaccine.
- I had the virus. I believe I'm immuned
- Although the percentage is low: there are too many people getting covid-19 shortly after getting the vaccine, including my wife, and too many getting very siick, and worse after getting the vaccine.
- We don't know the side effects of it at this time. Why is it being so promoted & almost forced? Something doesn't add up. Let us have free choice regarding our health.
- there is lots of info about side affects what its against the halacha
- In general I don't believe in getting vaccinated just because there is a vaccine available. I don't usually get the flu shot and would not vaccinate my kids for flu if it wasn't mandated. I'm not against vaccines but have had negative experiences with side effects as well as efficacy and would rather build natural immunity for diseases that are mostly not life threatening or with severe side effects. For diseases like polio, measles, mumps etc I am really thankful that there are vaccines and do give to my children.
- unknown long term risks, no medical benefit personally, I'm more likely to suffer a serious adverse incident or death from the vaccine (albeit maybe 1/100,000) than from covid, most of the info put out about the vaccines are lies (although the vaccines do work, albeit not the 95% number being touted), and the early treatments are far superior with a known safety profile, and there is clear political interference and pressure behind the covid vax movement
- I work at keeping my immune system strong, already for many years.
- It's not definite but forsure needs a lot more time to see it's effectiveness and that no knew side effects suddenly pop up like have been happening with some of the vaccines.
- I have problems getting vaccines
- It isn't necessary. Covid is not a death threat for people in my age group.
- Because it started with lies and banning Dr. Zelenko , taking away his licence after he helped so many people bh , including family members , just to make sure that the propaganda about the vaccine will go through , and after this his protocol became kosher again ,
- as above...and I/'We the people' (which you are blatantly denying...) could go on (if YOU were only willing to be open-minded, transparent, non-agenda etc) ... like all the tests studies from sars-1 era are KNOWN to have caused massive ADE with the animal trials causing most to die ETC - WHY DON'T YOU JUST DO A DROP OF RESEARCH...? "WE THE [JEWISH] PEOPLE" ARE FED UP WITH YOUR COMPLIANCE ETC - STOP PUTTING YOUR HEAD IN THE SAND...WHO do you think YOU are FOOLING? AND MAIN THING - RETRACT NOW - if its not too late already... N - O - W !!!
- NEVER BEEN TESTED LIKE ALL OTHERS,
- The long-term effects are not known yet
- Simply don't see the need.
- there are many effective treatment modalities and medicines that have found much success in combating the virus if caught early enough
- I would like to stay away from it unless something changes that would make me feel that it is safer/more important to get it than not.
- I want/need more time to see how it will play itself out. I.e. Johnson & Johnson vaccine was put on pause. I would like to see what the future holds for all the vaccines.
- Would love to see in a year or 2 what side effects there is or at all
- Not enough research
- the efficacy of the vaccine have not been proven.
- I'm not high risk and the mask mandate remains so I have to wear my mask anyway.
- I lost trust in the government & medical world. They're both corrupt & full of politics
- My grandfather got the vaccine after quarantining for a year. He developed Covid 10 days later and died!!
- The former VP of Research at Pfizer has warned the world that the vaccine is a time bomb.
- I would recommend that some people do get it. But I don't think it is necessary for someone with my age and health.

- The fact that lots of social media accounts are being censored left n right just for reporting negative side affects from vaccine is very alarming , to say the least. And I've read hundreds of personal testimonies of womens cycles being terrible affected. It scares the \*\*\* out of me. They always say "trust your gut"... This just doesn't feel right to me. Especially after the way covid was handled for the past yr...
- Bad reactions Still need restrictions, even after the vaccine. Now pfizer is saying a 3rd dose will be needed. Not enough data on long term effects
- If the point of the vaccine is to build immunity, for whatever reason would I need it? I also know that herd immunity is achieved when 80% of the population is immune, I believe my community reached the 80% threshold. I recently checked for antibodies after one year and its still there. I know that it's possible that the CDC will halt these antibody tests...well...
- scared of infertility
- If the FDA wont take responsibility for this vaccine, I wont take it.
- I know too many who have died after dose two of sudden death and too many menstrual issues. I am against forcing this experiment! .
- Too many people are reporting side effects and im simply scared.
- Too many people have had side effects or died (2000+) from the vaccine and I'll probably be the 0.1% since I'm very sensitive to drugs in general. I'm also child bearing age and the method of the vaccine affects fertility although doctors have not been upfront about it and it upsets me.
- Over the past year, the medical professionals were wrong about almost everything related to corona virus. We developed underground healing protocols which kept pretty much everyone who contracted the virus alive with a quick recovery. Most medical professionals still scoff at these protocols. There are some doctors in certain hospitals who will advise their patients to take these medications but cannot do so on record for fear they may lose their jobs. Corona virus vaccines have been in the process of development for MANY years and have NEVER been able to be tested on humans since they were not considered safe enough. Pfizer just unblinded the placebo group after 6 months (which in addition to being totally unethical, also means that there will be no way to asses long term affects). The very institution that was "brought to their knees" just a year ago now suddenly knows with such smugness exactly what to do. Too many suspicious things to me. Furthermore, the forcing of people to vaccinate before a proper approval is very concerning to me. Anyone has the right to take an experimental drug. But not to force, coerce or shame those who dont.
- I'm going nervous to get sick again
- I dont believe a young and healthy person under the age of 30 should take the vaccine. When you can fight it naturally and develope antibodies.
- There has been no testing of long term effects and zero liability on the part of the drug companies if there are problems
- unless I am strongly recommended by my rabbi or doctor, I will not be taking it.
- I don't know how safe it is
- Everything is politics and money nobody cares about health and wellness of anyone
- Until i see how everyone is in 5 plus years I don't see a reason to be another guinea pig. My grandmother just died of stroke complications which she got 9 days after a second dose of Moderna after she had antibodies!
- I'm hoping to get pregnant, and there's been cases of miscarriage
- I already had covid
- i would like to wait and see in the next year
- I think i had covid before there were tests available to confirm it. I think natural immunity probably outweighs any protection a vaccine may provide.
- BezH,we feel that Hashem is taking away this magical just as Hashem brought it Therefore bezH,we feel it is on it,s way out,bezH,with chested and rachamim,without the vaccine,Amein!, kayn yehee Ratzon!
- It's not tested, Not proven, Something that was NEVER allowed! And it's not even fully approved! Only emergency approval.
- I might take it if it seems to help for long term covid effects
- This method of combating illness is too new and the possible impact and benefits are yet to be seen. There are 2 actual vaccines currently, one in Europe and one from China. The approval for the mRNA is only an emergency approval and not yet FDA approved or fully vetted. According to the CDC's own website, there have been many reactions, illnesses, and even deaths and, even the website says, the number of reactions are

always underreported. I would rather work from home and limit exposure etc than take that kind of chance with myself or my family.

- I believe that the chance of getting virus again is similar to whether you received vaccine or virus.
- I don't think it's ok to play Russian roulette with my body. Some people are getting very bad side effects and or dying.
- The truth is not out in the open it is being covered up.
- Cues I'm using my brain and I saw in past year that no data and no politician and no one of the big dr. R reliable and there is only 1 way to stay alive when we listen to our rabbis and they showed us how important shuls and moises are to stay open and this is the reason y covid started to slow down last year after peisach not the vaccine and not the quarantine only god helped us and he will help us further
- Every day i hear of more testimony from people that suffered severe side affects from the vaccine, and from people being around those that got the vaccine and got sick, hospital nurses said they got bad covid cases from people who had the vaccine! Main reason though is still the manipulation and lies from government/ media and the like....
- After hearing what Bill gates says about decreasing world population and him funding Pfizer, and fauci being corrupt, and big pharma being notorious for their scandals, the lack of animal and human trials, the dangerous chemicals in the vaccines, mRNA, the gov and big tech pushing the vax, all the shady stuff surrounding covid, therefore I'm confident covid and the vaccine are a hoax and the gov and big pharma do not have our best interests in mind, whether they're doing it for money or for control over us, basically I'm not taking the fauci ouchy no matter what
- If guidelines and studies will change i will probably get it
- Lack of safety
- I am wondering about the effects the vaccine has on young women.
- If vaccinated person can get COVID-19 any way, but in the mild form and did not know they got sick, they will make sick people around them. It will only spread COVID-19, not stop it
- this will be just like sars or other infections that has come out, they come and go!!!!!! its like getting strep, there are meds that we can take.

stay active and stop the stupid mask wearing and if there are those that are "AFRAID" let them stay with the mask on forever !!!! and breath their germs. i know of too many people that had worse disaster going to the hospital then staying home and getting in house treatment.

- Don't trust the government to tell the truth. I believe its all about the pharma companies making money. Now they say you will need another vaccine in a year. Its been a year since I had Covid and about a month ago I still had antibodies. A minority of people develop complications, 99% recover, so what's the rush for the vaccine. I refuse to let the media put fear in me.
- I'll wait and see the results
- Its a big scam
- When all countries and the Health Department's have 100% trust in it and people that are vaccinated don't have to wear masks or can travel with no issue then I myself will have trust in it but until their trust is weak I don't think it's safe yet to take it
- i don't think young people should take it !
- I think there's not enough study on the vaccine it was tested on human beings and people that I know have covid took the vaccine got sick again
- There is no long term data about the side affects of the vaccine
- It's dangerous. Many people have suffered from its effects. Furthermore, healthy people don't need a vaccine. Also, long term safety studies have NOT been done.
- There's no reason why I would need to inject myself with something that's a trial and hasn't been approved by the FDA. I've heard too many stories of ppl dropping dead, terrible side effects and I trust Hashem will take care of me
- I'll only take it if I must have it. As of now, I don't feel that I have to.
- I am very concerned about the possible side effects. Also, we don't know how they will affect a person in the future. I am totally against it.
- They don't care about our health, it's just Money making business!
- As I said before, there is no reason for this experimental vaccine. It is a political gambit. The only people who are benefiting are the vaccine manufacturers and their henchmen. Further, this experimental vaccine has more deaths reported to VAERS in the few months it's been around than in the last decade from all other vaccines. It

is not a vaccine by the standard meaning of the term but a genetic therapy product and numerous serious injuries as well as deaths are being reported by people following receiving the experimental vaccine already. Hashem yerachem - who knows what the future holds for people who've gotten it.

- Many people are dying from it. The media and the government are hiding information about side effects and about treatments.
- I have a problem when government pushing me to get vaccines
- We already know that thousands have been killed from the shot and tens of thousands maimed. We are expecting much more deaths in the next 6 months to 2 years from ADE, cancer, brain damage, and other tragic illnesses caused by the shot.
- Natural immunity
- Not relative to how fast the vaccine was made. It's more about what is trying to be done with the vaccine. In general, since election fraud and all that is going on in the Biden administration, that he is not fit to be president but being used as a pawn to get the bitter Dems policies out. I have a very strong gut feeling that the current vaccines are really there to hurt us, whether to infertile woman and men so they can have a hold on furthering the generations or just by killing off or maiming so many more. Not statistics, but real life stories keep proving that even though so many took and little got affected. How do I know who will get affected. Will it be me or my close ones, family etc. Unfortunately I and many others have lost trust in Dr. Fauci and the government. We see communism entering our lives and there is definitely significant data in the vaccine and otherwise to prove that. The Biden administration is all about choice but not anymore. Everything has become and will become executive orders. America has lost its freedom and our Jewish and state officials are bending into this. Therefore I will NOT vax myself nor my close ones and family. I do NOT trust the vaccine nor what the officials say in the affirmative about it. And there are many like me.
- I don't trust the vaccine. It was rushed to be created for political reasons.
- I have an autoimmune disease and it could be dangerous for me
- we will have to wait for sure 5 years to see how it works
- This virus and everything ... It's all political!! It's was put out purposely with an agenda!! The vaccine isn't here to protect us at all! Many people deathly sick after taking the vaccine! It's all big pharma controlling and people gotta open their eyes and see truthfully what's going on!
- I don't fully understand why if I have antibodies why I should still take the vaccine, after all everything that is effective can potentially have side effects, but the benefit may outweigh the risk, this gamble should be done when you see that the antibodies are no more in the body, I do plan to monitor myself to see if I still have antibodies, if not, then I can consider then taking the vaccine according to the status of the safety being stated then by the medical establishment
- Those who are pushing the vaccine are proven to have evil intentions, making it non-sensible to touch it. Also they have been lying to us the whole year so they are not to be trusted
- I will only get it if it is mandatory in order for me to go to work.
- I've been told that it can cause infertility and it isn't yet even proven effective!!! It was developed at way too of a quick pace to be able to be tested and proven safe, and the main of population isn't even at risk
- I always have side effects
- Fear of the unknown
- I listen to outlets that are into "alternative medicine", more the natural way of living. They are very very ANTI the vaccine and at this point, there is no way I'll get it. It is very political and not even 100% tested.
- Research I have seen so far is conflicting
- I don't have much information one way or another ... so until it is not mandatory I feel that I can get away with it
- I feel like it's all political and there is no way to trust anything from anyone anymore! It's unfortunate but it seems there is an agenda and they are pushing a vaccine which many ppl have had several side effects to for a virus that if treated properly and early enough has a 99 percent survival rate
- I don't want to be the guinea pig and find out in a few years from now that health or fertility issues were due to my taking the vaccine. I would like to see more concrete research and studies so that I know what my risks are before taking the vaccine. I am not against vaccines per se.

- I will not get vaccine as long as it's not FDA approved. Many times once it goes through the regular testing there are still side effects and vaccine need to be tweaked how much more so a vaccine that wasn't even tested for safety yet why would I take that risk over covid that isn't as dangerous
- I am very nervous
- It is NOT FDA approved. It is NOT a vaccine. It is an experiment approved only for emergency use, with many reported side effects that seem to be ignored in order to force those of us with concerns to keep quiet. There are no long term safety studies on this injection. It does NOT prevent infection or transmission. I will not submit to being part of an experiment that does not give informed consent that it is part of phase 4 of a drug trial.
- The Panic that the medical world made and even Hatzalah has done damage that needs to be taken care more than a vaccine !
- I will possibly take it eventually, I simply don't feel that I have to be from the first once to take it
- Maybe in the future I'll get it because they just found out that the J&J vaccine can cause blood clots so eventually within the years it will be all cleared out
- I am concerned with the long-term possible side effects. If I get the vaccine it will not be until at least next year.
- It's all politicized
- I'm in perfect health now I don't need to jeopardize my safety for irrational fear
- if you take the right vitamins and medications the virus won't cause you any damage if the vaccine has side effect on you it's very dangerous
- I've heard of people that died soon after getting the vaccine
- Would take once regular available and recommend by doctors and professionals
- I'm pregnant and am scared of side effects.
- See Dr Andrew Kaufman See Children's health defense website See Dr Vernon Coleman See Prof Delores Cahill
- We don't know enough about it. Look what just happened with Johnston and Johnston.....
- The government bet on the vaccine over a cure or medication and there were huge amounts of money at stake when the vaccines were approved.
- They are trying to get everyone to use the vaccine but it is already showing in people who took it at the beginning that the effects are wearing off.
- Because The whole covid19 is a nothing it's a virus that has a 99.7 survival rate! I've had it twice! It's like a bad cold where I lose taste and sense. That's it!
- I'm young
- The survival rate of covid is higher than the rate of the vaccine being safe and effective
- it was made in a very fast time frame and now you see what happened to J&J vaccine that it was recalled so you don't know if it will be a recall to the other vaccines in the near future
- There's some deaths from it, side effects, medical problems, and was said that it can potentially do long term damage in the inside
- This vaccine may kill on the long term. Especially the elderly, no matter how many years elapsed.
- Most concerned about the rush, and the way it is being pushed onto people to take
- it's too new & still an experiment
- I don't trust the vaccine because it is very new. My spouse will probably get the vaccine. If the vaccine becomes mandatory I would get the vaccine and wouldn't put up a fight.
- Something is very wrong. They are forcing ppl to get it. Something sounds extremely fishy about the whole thing. So far almost all the covid rules make no sense. .... and now that it's relatively quiet why are they forcing everyone to take it???????
- Don't know about the side effects. I hear it can affect fertility.
- not until it's proven 100% safe
- the Israeli govt backs it
- Need to see the vaccine effectiveness in the next year or so
- I'm scared it might affect fertility or cause birth defects/miscarriage
- It has harmed so many people I know. I know people that would have lived a long life had they not died from the vaccine. Health should be the focus and a vaccine does not improve one's health.
- Concern about animal studies post mRNA vaccination that showed enhanced autoimmune reaction post vaccination after exposure to virus in the wild
- afraid of any potential harm or long term side effects
- I am young and healthy BH. I have had COVID and therefore currently have antibodies (checked via

bloodtest). I am not ruling it out for the future, but right now, the very minimal risk I have of COVID does not justify the potentially unknown risks of the vaccine.

- Asking (or G-d forbid REQUIRING) those for whom covid causes mild symptoms to get a risky, never before used treatment without a full understanding of its long-term side effects is irresponsible.
- I think the small hypothetical risk there is for young fertile women is not reason enough to take vaccine for a virus that My body already fought.
- I'd prefer that Hatzolah get an audit from top to bottom before sending out surveys.
- There is nowhere near enough space. I don't even know where to start. There are so many reputable doctors and, more importantly, reputable Orthodox Rabbis (with backing from Torah sources) who are adamantly against it. It's nothing but a population control tool. Jews are not sheeple; we think with our heads for ourselves and examine pro's and con's carefully. When has government had out best interest in mind? Ha-ha. "Pandemic" is manufactured. People are not awake and blindly following orders. Masks do nothing. Fauci is the biggest idiot. It's all political. Lockdowns have destroyed economy.
- Seems that even if vaccine is effective it will need continuous boosts.
- There is no scientific debate allowed and the relentless censorship creates a situation where only one side is heard and that's called propaganda. The pressure on people to take it is insane! Lies about the FDA approval (see the MoH's website), no informed consent - none of these are good reasons to get enrolled in a clinical study. Safe and effective treatments are banned! And most of all it doesn't stop infection, nor transmission but people are bullied into a two tier society. Those who got it are not any safer to be around than those who didn't. The green tag is a manipulation so Bibi can hand over the Jews to Pfizer,..he needs to meet his quota, .. now going after the children,... the survival rate for the younger age group according to the CDC is over 99%! According to Halacha you are not supposed to get a "vaccine"( this is not a vaccine) or any treatment unless it benefits you. Also check out the Pele Yoetz that says if out of 100 doctors 98 say take it, and only 2 say don't , don't

do anything, just wait and see. That is the halacha and there are more than 2 doctors who say this injection has not been properly safety tested. The long term effects are unknown and there is evidence of short term harm to too many people to count. Etc etc. I could go on.

- If it is as great as they say, why are all scientists and doctors who have a different point of view silenced. Why is there tremendous pressure to get it? Death rate for under 75 is almost 0, why are they pushing so hard for it. Why is it tied into agenda 21 and NWO
- I dont think its so effective for ppl that had Covid and I am concerned about many side effects.
- check out vaers and the side affects, injuries, and deaths which were reported in these few months after covid vaccinations.
- It's too new to know if it's effective as a vaccine. I am not interested in being a "test" for it. In the past, the vaccines were around much longer to prove their effectiveness and info for whom it was okay and not okay we're known before it was given to the gen population.
- I lost trust in both government and the medical profession. I had experience with doctors who pushed drugs - from antibiotics (a doctor who refused to consider a different antibiotic despite the fact that it wasn't working and harmed my child) to more harmful treatments (doctors who wanted to go to extremes when natural cures were just as or more effective) - apparently without concern for the harm they did. I am NOT an anti vaxxer and I DO believe medicine has its place, but I developed a healthy skepticism. I am taking a wait-and-see approach, and if I feel the vaccine is warranted for ME, I will consider it again when it has a track record.
- Politicians and medical professionals like Dr. Fauci say even 30 days after you get the vaccine you still need to wear a mask. When people in charge say things that make no sense it invalidates everything they say.
- Because you still have to wear a mask after receiving the vaccine
- G-d is protecting me, I haven't had Covid and hopefully won't get it
- The risk of Covid to the average young person is very minor
- I don't know what, if any, long term consequences it will have
- I have read extensively from alternative sites about possible medium-long term serious

negative effects (ADE, immune escape). mRNA technology never used before. MOST IMPORTANT. there are medical treatments which are very effective, primarily IVERMECTIN, and hydroxychloroquine. with Zinc, D3. Dr Pierre Kory, Dr. Phillip Marik, Dr. Simone Gold, Dr. Sherry Tenpenny, Dr. Zelenko and more Americas Frontline Doctors. Vaccines NOT APPROVED. only for emergency use only. Vaccines cannot be mandatory PARTICULARLY WHEN THERE ARE MEDICAL THERAPEUTIC EFFECTIVE TREATMENTS. I am extremely upset that Bibi Netanyahu pushed this on 5 million or more Israeli's and the green passport. He has 30 year confidentiality agreement (gag order) with Pfizer, 30 years!! An extreme comment I read online is that the mRNA vaccines are "Auschwitz in a needle". I am not all knowing but would not be surprised if people started dying in 3-6 months or even in two years.. I am 74 years old and no comorbidities, and I will never take any of the current vaccines. Never. Considering taking Ivermectin for prophylaxis due to age and worry about common problem of "long haulers". One of my doctors is a long hauler, She is 53 and suffering still since one year ago. My Chabad rabbi was very sick at home, A parent brought him Ivermectin, and one pill at night, and the next day he was miraculously better. Had not eaten in 8 days lost 20 lbs. Miraculous. not running around, but TREMENDOUS IMPROVEMENT THE FOLLOWING DAY AFTER ONE IVERMECTIN AT NIGHT.

- Non mainstream media has hundreds of stories how menstrual cycles have been crazy messed up after the vaccine. Even for ppl living with those who got it and didn't get it themselves. I won't take a chance with fertility
- It's still experimental and there are many people being harmed by it. It should only be considered by individuals in high risk categories without any heart related or blood conditions.
- Having antibodies I feel I don't need to rush to get it before more info is in.
- I have an allergy that contraindicated
- Past experience with vaccines. My child was injured 15 years ago.
- need to wait a bit longer for side effects

- It doesn't work! People still get Corona with the vaccine no one says that it is Also too new to say it safe
- I understand there's two ways to see this here..to me Hashem created me with everything I need. The ppl behind the experimental shot called the covid vaccine are not good people & they are not God fearing people. The way the shot is manufactured is done in ways not in alignment at all with the Jewish way of life. it's heartbreaking & nauseating. I think if our rabbis knew more they may not be saying to take it. Everyone can of course do what makes them happy because at the end of the day Hashem will protect us regardless of what we do or do not put into our bodies...but after doing my hishtadlut in regards to researching this shot & how it was made, it's potential side effects, & it's effectiveness, & weighing that with the actual virus called COVID which I am sure we were all exposed to at this point, I will take my chances & prefer to get the actual virus
- Don't trust fouchi
- I've seen too many side effects especially to women's health. I will not get the vaccine until there is more reliable studies on the effects of the vaccine. Another reason not to get the vaccine, is cuz I'll still need to wear a mask after I get the vaccine
- See previous answer-no one is addressing the previous infected recovered patients and only concerned about the decreasing numbers of not yet affecteds
- I'm not very much pro vaccines in general and I don't think I should rely on anything that anyone says about this virus. Even the biggest experts keep on changing their minds on how this Virus is going. So I would wait a 10-20 years to decide
- Some studies have shown that it may affect fertility.
- My natural immune system that Hashem created will protect me better than any man made vaccine or other pharmaceutical can.
- There is to give or take a vaccine for something that I have a 99.98 % chance of survival. On top of which I got covid a year ago and recently checked and I still have antibodies.
- Because of all the terrible reactions I'm seeing my close friends and family have
- Might cause infertility C"V
- The best immunity is the natural one.
- Have had Covid.

- The truth is being covered about how many people are dying and the severe side affects
- I've heard about the possibility of affecting fertility I'm scared about that
- I trust HaShem
- In childbearing years
- Not safe
- People are reporting multiple terrible side effects.
- I don't want to die
- I don't believe the trials that were done were effective. The trials with animals all showed the animals dying when getting a respiratory virus other than covid
- At this point I believe that the spread in our community is low. 2. If children aren't getting the vaccine, I think there's a concern.
- Pru revu!!!!!!!!!!!!
- I have antibodies already. Why should I take the vaccine?
- I have a daughter who made Aliyah a few months ago. Israel won't let me in unless I am vaccinated. :( if I can't see my children and grandchildren, I will be 'forced' to get the vaccine. :(
- I will probably not get unless for some reason I will have to like maybe for travel purposes
- Because it is in the experimental phase and they are failing to monitor the vaccinated, therefore we have no way to analyze if there are negative effects occurring more than would be expected by chance.
- it is against the torah,
- Until I see long term effects I will not be getting it. Additionally, it does not prevent you from getting it again/at and social distance and mask mandates will not change once everyone gets the vaccine so why the risk
- It's very new. It's quite simple as time will tell. It is not unusual for unknown side affects to appear in various unpredictable and harmful ways.
- Having high anti bodies so don't see a reason right now
- I view it like the flu shot. The one year I got it I got sick. I have antibodies right now. Not jumping to get it. I don't view covid as a major threat to my age group
- As with all things pharmaceutical, they are to be used judiciously. In my case, I don't believe it is needed
- Vaccines in general have ingredients which aren't safe. Anyone can simply read the insert and see for themselves. It isn't necessary to listen to professionals, government officials or religious leaders who are all just repeating what they've been told to say.
- Leaders , rabbis , doctors are pushing a vaccine that is only under EUA. No long term studies this goes against HIPPA laws to encourage Jewish people to do something , manipulate and coercion when these should be discussed privately with your own doctor I do not understand the need to confuse people with opinions and completely silence anyone who questions those opinions if anything it makes it more likely for people to not listen and distrust leaders doctors and rabbis
- If people get the vaccine then it is not necessary for me to take it.
- I think the reason so many people supposedly died of corona was because they were attributing almost all causes of death to corona. I don't trust the government telling us a vaccine is safe after coming to market so quickly. I am nervous about the side effects and deaths I am reading about altho the medical world is claiming those are coincidence.
- My doctor advised me to wait since I still have antibodies from having COVID one year ago. He wants me to see if it pays to get the vaccine, or if it doesn't confer any additional advantage.
- There not safe and we don't know how effective they are, we are the lab rats
- Very little facts on its safety and effectiveness are out there. Many many reports to VAERS have been reported and we should not take this information lightly when recommending the vaccine to people. Especially the young and the pregnant! We have no right, we have no proof of it's efficacy nor of its safety so repeating things we don't have resources on can be putting people in danger.
- Scared of side effects. Don't feel like we needed the vaccine to begin with and we have to move on to normal life again.
- I don't believe it is necessary, I don't believe it is safe, I don't believe it is effective
- Not sure its effective
- There is NO pandemic. Less people died in 2020 than in 2019 in Israel and many other countries. They have never purified or identified a coronavirus, or proved that it has harmed anyone. They use a faulty PCR test which has a 98% in accuracy rate and cannot detect viruses

according to its inventor Kary Mullis. Going to a psychic or witch doctor would give you more accurate information of whether you have a coronavirus. Governments and media are liars and most doctors are completely ill-informed and blindly trust corrupt organizations like the FDA and CDC. The thousands of doctors and healthcare professionals that speak out the truth are censored and shut up. Here are a few.

<https://questioningcovid.com/> Here are some intelligent and informed Rabbis who don't blindly bow down to Big Pharma and Gov the Haman and Amalek of today!

<https://www.rodefshalom613.org/2020/12/why-rabbis-are-alarmed-by-the-covid-19-vaccine/>

- Anti HaShem Anti Torah
- If it is proven not to harm my ability to naturally fight off infections in the future
- I see a higher risk in taking the vaccine than the benefit of it, and Corona is less of a threat and very treatable, aside I have a strong immune system BH (even with an autoimmune disease) and am not afraid of getting corona
- I'm concerned there are side effects that we may not know about yet. Already they are discussing needing a 3rd dose for the variants. I feel like everyone is learning as they go along. I would only get the vaccine after we have more long term data.
- I dont trust the government
- This is not FDA approved, only approved for emergency use authorization (which is authorized when there's no treatment, but there are treatments....) I don't want to be part of this experimental vaccine, or be a guinea pig. (I also have family in Israel and hear whTs going on there..) I know of pple with bad side effects, and I know pple who know people who have died after taking it and know people who have gotten Covid after the second shot. I know of someone who had brain aneurysm after shot. Nothing is being reported in the media (I do watch TV, radio, newspapers...) and in fact I have myself seen YouTube videos that doctors (or even rabbis) have made talking abt the vaccine and what is wrong with it, and those videos are taken down by youtube...here one day, gone the next. I am shocked that doctors and rabbis are pushing it. I don't think they are informed with all the info. There have been also issues with pregnant women taking it and having miscarriages soon after yet all these doctors are saying it's ok for

pregnant women to get the shot. PLUS there is so much treatment now for it, that was not know in the beginning in March 2020. Why aren't doctors, media talking abt boosting ones immunity, ie Vit D, Vit C, zinc...etc... If caught early, it can be treated at home. I know people who have taken Ivermectin and other things and have been cured... It is not proven to prevent Covid-19, or prevent spread, only to lessen the severity of symptoms. They said one still has to wear mask and be careful (although I think now they are lifting restrictions). They just don't know enough about these vaccines!!! And now the Johnson and Johnson was pulled for 6 (now they say 8) cases of blood clots. I guarantee there are more. Not everyone is reporting to the VAERS site. That is fraction of adverse events. There is so much more to write and tell, but not enough time here...this should not be mandated on anyone...just let everyone choose for themself...

- I don't believe what I hear from government any longer so it makes me not want to take it yet
- Doesn't seem to be a point. Hasn't been enough time to see if they are effective
- It's still New and dangerous!!!
- I am generally against vaccines with having an Autistic Family members having negative reaction to Vaccines prior to Covid 19.
- It is politically motivated, not honest, selectively reported with all and any dissenting facts and medical professionals being censored and cancelled, most Rabbonim being informed of the "facts" selectively - being fed the official party line. By the established swamp. Why follow the herd into the unknown? With so many serious questions and doubts still unresolved? About a disease that is essentially not deadly? Doesn't make any sense!
- Can't tell what the future side effects are
- I'm young
- I cant believe that as Hatzalah workers you don't see enough to make you sure about this answer.. it doesnt add up
- not enough information on it out there it was developed quickly and there isn't any study on it if it is really effective and what are the real side-effects its very new and nobody can give you real sold information or advice on it due it was developed quickly and didn't get the real Research and testing etc on it
- My rabbi said not to get it.
- Don't trust the vaccines

- Because they take no responsibility
- We're not Guinea Pigs , we are Torah Yidden!  
They are not approved at this point in time it only has a EUA, and past Corona virus vaccines, ended up resulting in ADE for the animals in the trials.
- When so many people begin dying of heart failure, sudden heart attack, blood clots etc... and others have paralysis, neurological symptoms, the virus itself... all after getting the shot, and its all being hushed... its clearly not safe!! I wonder why Hatzala still insists on all their volunteers to vaccinate with this experimental shot?! Will they take responsibility for their own if they die from it? Will they admit it was their fault? And the use of such discrimination and coercion on its own is enough to make me not want to donate to Hatzala again! So unethical!! The first oath a Dr is required to take is First Do No Harm. This is harmful. There are other treatments for this virus and just because this is being pushed by government, it doesn't make it the right treatment!
- There should be more emphasis on Prevention. Optimizing Vit C & D levels is a cheap, easy way to ensure COVID resistance or mild reaction to COVID. Cheap treatments such as Hydrogen-Peroxide nebulizer therapy should be publicized. See this article  
[https://articles.mercola.com/sites/articles/archive/2021/01/07/high-dose-vitamin-c-for-coronavirus.aspx?ui=7b08a3c40aa39704b63a28707ab446d13129dacfa19b9134f35dc55508ae7ed9&cid\\_source=dnl&cid\\_medium=email&cid\\_content=art1ReadMore&cid=20210107\\_HL2&mid=DM768173&rid=1053580704](https://articles.mercola.com/sites/articles/archive/2021/01/07/high-dose-vitamin-c-for-coronavirus.aspx?ui=7b08a3c40aa39704b63a28707ab446d13129dacfa19b9134f35dc55508ae7ed9&cid_source=dnl&cid_medium=email&cid_content=art1ReadMore&cid=20210107_HL2&mid=DM768173&rid=1053580704)
- I don't need to put an experimental drug in my body for a disease that has over a 99 percent survival rate and almost 100 percent fir kids and am terrified and horrified that the rabbis and drs are pushing it on our children. This could have severe repercussions and is extremely irresponsible.
- after a few years maybe would take it, if proven safe after many years
- Here is a list of over 150 doctors who are warning against the vaccine:  
<https://doctors4covidethics.medium.com/doctor-s-for-covid-ethics-signatories-15878f9ff76>  
Former Pfizer VP: 'Your government is lying to you in a way that could lead to your death.'  
<https://www.lifesitenews.com/news/exclusive->

former-pfizer-vp-your-government-is-lying-to-you-in-a-way-that-could-lead-to-your-death  
People are dying from this vaccine; it is not being reported. The fact is that in the US, over 2,000 deaths were reported after the vaccine, many within hours or days:

<https://www.openvaers.com/covid-data>. And studies show that VAERS often gets only 1% - 10% of cases reported. There are many, many deaths in nursing homes shortly after vaccination. Probably tens of thousands. Many Rabbonim and other have died shortly after getting the vaccine. In Israel, there are thousands of reports of illness and death shortly after the vaccine. Listen to attached verbal report on Rabbi Rappaport. Here is a new concern raised; that it can cause Mad Cow Disease:  
<https://greatgameindia.com/mrna-vaccines-degenerate-brain-prion/> Here are a number of doctors who addressed the frum community a while ago. Some Rabbonim speakers as well:  
<https://healthycrownheights.blogspot.com/> Dr. Sherry Tenpenny is particularly knowledgeable. She predicts that the life-expectancy of anyone taking the vaccine is between 5-10 years (less for elderly):  
<https://healthycrownheights.blogspot.com/2021/02/dr-sherry-tenpenny.html> Alexandra Henrion Caude: A Geneticist - French Institute of Health and Medical ,  
Very strong warning of gene therapy About

The uncovering of the vaccination data in Israel reveals a frightening picture ,Àì Analysis of vaccine deaths in Israel

[http://www.nakim.org/israel-](http://www.nakim.org/israel-forums/viewtopic.php?t=270812)

[forums/viewtopic.php?t=270812](http://www.nakim.org/israel-forums/viewtopic.php?t=270812) This is the tip of the iceberg. There is no one in the world who can say that this vaccine is safe. It is literally impossible to know medium to long-term effects.

Anyone claiming it is safe is not only lying but saying the BIG LIE that somehow people are believing, even though with a minute of reflection, it is obvious they are lying. I have researched this topic extensively. Anyone who takes this vaccine is simply misinformed. Anyone who researches the subject correctly and hears the hundreds if not thousands of doctors warning against it, will not take it. 40% of doctors are not taking it. Additional links: Censored: Doctors & Scientists on Covid & the Experimental Jab <https://www.rodefshalom613.org/2021/03/censored-doctors-scientists-on-covid-the-experimental-jab/> Why Do All These Rabbis Warn Against Getting the Covid-19 Vaccine? (list of Rabbonim against the vaccine)

<https://www.rodefshalom613.org/2020/12/why-rabbis-are-alarmed-by-the-covid-19-vaccine/>

- when it will be approved I will be considering taking it
- If I have a high antibody count, this pressure to get vaccinated doesn't make sense.
- I would like to see long term data. I also have seen first hand how very often side effects are dismissed or not reported, which is also of great concern.
- I only get my information from the government and medical profession. The contradictions and lies that come from the government and those medical professionals who represent big pharma is enough to convince me not to take this experimental treatment. Dr Noar Bar Zev from Johns Hopkins openly admits that this experimental treatment will not prevent one from getting the virus nor transmitting it to others. So what's the point of getting it Here?! He also admitted that we won't know the full side effects of this experimental treatment for up to 20 years. Huh? Yet,he still insists that this treatment is safe and effective - for a virus where your immune system has an almost 100% chance of fighting it off naturally without any outside medical intervention. Thanks, but no thanks! I'm sick of all of the lies, deception, coercion and

bullying surrounding this Quackscheme. Worst still, I'm baffled by the actions of all of the frum organisations who are supporting what the government and big pharma is doing. Shame, shame, shame!

- It hasn't had enough testing to make me feel comfortable.
- <https://rebrand.ly/CovidVaccineFacts>
- Have you checked the side effects? Please do ur research. The vaccine is WAY worse than covid itself.
- There is absolutely no reason a young person should take it
- Many people have died from the mrna injection..many deaths are not being reported as related to the injection or had the injection recently before the adverse event. People are being used to test a completely unnecessary treatment. The long term safety is unknown. This pandemic was not a natural event, it was planned well in advance, there are big profits being made from these injections while simple treatments have been PROVEN to be highly effective in early treatment..it is UNCONSCIONABLE that doctors are telling sick people to go home and don't come to the hospital unless they can't breathe and by then effective treatment is too late. It is IMMORAL that doctors are being kept in the dark about simple inexpensive, HARMLESS, EFFECTIVE medicines and BANNED from prescribing them: ivermectin/hydroxychloroquine/zinc ETC ETC. The ADE effect of the mrna vaccine is a SERIOUS cause of concern as is the continual external shedding of virus after vaccination. I could go on about the stupidity of this covid plandemic.
- I'd like to see more research into it
- The vaccine has been tested for a very short period of time, a few weeks, not years, so who knows what the long term side effects are. Additionally, no one takes liability for it. If it's safe why aren't the companies willing to take liability?!? Furthermore, there is no reason why young people should be vaccinated. Those who argue that young people need to take it in order they should not give the virus to the elderly, there is no scientific evidence that one who has been vaccinated cannot carry the virus.
- Side effects and not enough long term data on the long term effects of this human experiment.
- I heard that the vaccine harms the reproductive system.

- I don't trust the people behind it. It's all a money game and a way to control us.
- I have been following closely with online reports and medical data. There's a high correlation btwn the vaccine and heart attacks, strokes, tremors, blood clots etc. Safety will not be proven until the end of the trial in 2023. And even then the data won't be accurate. How do I know? Because big tech and the medical industry is already censoring, gaslighting and denying people's testimonies. It is assur to put ones life in danger and so I don't believe it is halachically mutar to be a lab rat for a virus with a 99.7% recovery rate.
- i am not against vaccines at all, but also not pro. i guess time will tell....
- Hashem created our amazing immune system. How dare stupid humans suppose they can improve on Hashem's creation. Furthermore this is not a vaccine. It is a weapon designed to destroy humanity, Hashem's creation.
- Bc the vaccine companies are indemnified and the governments are invested... so eh I don't trust them.
- I might have to get it to travel
- There are too many reports of adverse reactions that I rather not risk the reactions since I healed quickly from corona when I had it and there were no risk of adverse reactions when having the virus itself.
- why should I?
- The medicine we have is safer then the vaccine . If COVID is treated properly it's not life threatening for most . I believe the reason people died is because they weren't treated properly with the right medicines. And they were neglected snd blocked from the right medicines and proper nutrition.
- Here is what I personally experienced. A few month ago when the vaccine was offered to medical staff only, i sat in a dental office while watching the dentist offering the vaccine to the receptionist, she right away accepted the offer. A while later my husband was there, and this receptionist was telling another patient how she took vaccine and a while after got the Virus!! Boy, i thought the people who say they're not effective spread mis-information.. here i experienced this first hand.. and no once cares, it probably wasn't reported anywhere and we can't rely on the faulty statistics
- To the beat of my knowledge The vaccine is not FDA approved and everyone taking it is the "trial"

I'm not comfortable with that. Its too soon to tell side affects or anything else that can come from this vaccine.

- I would get it if I need it to fly somewhere, but at this point, don't feel a need to get it
- This vaccine has not been tested properly!!! They do not know the effects on the body. and once you are vaccinated you cannot be 'unvaccinated' The damage is done
- If it becomes safe reliable and needed like other vaccines.
- The vaccine isn't a real vaccine . It's gene therapy and will kill off most of the people who take it ( as it clearly states in the government document SPARS 2025-2027). Unfortunately it's also affecting people who are around those who are vaccinated . Women are experiencing terrible problems
- If i don't need to get, why should i do so?!
- Because no drug or vaccine is completely safe. This one, in particular, does not have the years of post production surveillance that other vaccines have.
- Not enough research. Covid is treatable
- I don't feel comfortable taking something that was made so quickly but I am pro vaccines just not this one
- I take more of a natural/holistic approach to health and since I'm young and not high risk I prefer to wait and either not vaccinate or get the vaccine when I absolutely must for work or travel.
- Most people do not have a strong immune system, therefore, should absolutely take the vaccine.
- Just as I don't get the flu vaccine every year because number one I don't need it number two I I'm not looking to put extra foreign matter in my body for no reason number three to benefit political and financial agendas so too with this vaccine I don't see any particular benefit of me taking it except for the fact that it will make other people either richer or more politically comfortable
- the same reason YOU want me to take the Vaccine (your pocket..) is the reason i'll not take it (my life is more important)
- my childrens doctor does not like giving vaccines until they have been tested for a few years ... however if i found out i had any underlying health i would definitely go get one right away

- The vaccines are not safe, not effective. A year down the line, everyone is going to start to realize they've been lied to when everyone is getting auto-immune disorders and other severe health effects (may Hashem protect us and perform great miracles to save us!). If people actually read the science, it's not hard to see that this is what is going to happen.
- Not enough is known about these vaccines. Many ppl are dying and many ppl have been injured in many ways from the vaccine. Women's health and pregnant women's health can be compromised. Men's reproductive health and general health of all ppl. If there are medications that work why take such a risk. There is no necessity at all.. Drs are not being allowed to prescribe medications. The government is taking charge of ppl's health. Drs are supposed to. There is no liability for the vaccine companies. Lots of lies. The government is promoting fear and therefore ppl are not thinking straight.
- I think there are enough treatments for covid that work, but mainly because I had it and it wasn't bad I don't care if I get it again. And, I don't like the lack of long-term safety data.
- I see and hear a GREAT DEAL of dishonesty as unverified info has been reported and the next second it is counter indicated, and citizens are threatened to conform to these idiocies, to forfeit our need for choice. Some people NEED to do, to conform, to "authorities." Others require the freedom to choose and to be entitled to the truth and the right to self care and self heal from illness as well as the right to be in a like community, supportive, nurturing, caring. Not locked up to ventilators and suffocated to death amidst a nation in panic mode ☹️☹️☹️☹️☹️ scared to ,ð†Ô]è ☹️íÁ death and angry ☹️ò° and uncertain ☹️\$® as individual rights to privacy and security are threatened: yes, there is illness and homelessness and addictions and gun violence & &
- I will only get if its necessary
- I think all the seminars and articles written in Jewish publications are one dimensional and one sided. These are unprecedented times in history and there are a large number of ppl who are wary. It would b nice to have someone step up in support of those concerns. Masks for children is abuse and no dr has spoken out. It's all about vaccines and a general narrative.
- This is a new type of vaccine which is actually not a vaccine at all. It is very misleading to tell people this is like a regular vaccine when this is a whole new technology that has never been used before. Anyone taking this vaccine now is being experimented on. That is the good to honest truth wether you want to admit it or not. Just because the government or the vaccine companies tell you it's safe and effective after three months of trials, when vaccines are usually tested for 5 to 10 years does not mean that I shouldn't do my research and remain cautious about a new experimental technology that we have no idea what the long term side effects are. I am not an anti vaxxer. People who don't want to take this shot are not anti vaxxers. We would just rather be cautious than jump into something that has no long term safety studies. If you think about it this is actually the most common sense way of handling it. Rather than jumping to take a shot without asking any questions and blindly accepting everything vaccine companies (who have no liability) are telling you.
- I will only get the vaccine if it is required to travel to Israel or if my Rav and or doctor advises to which they haven't until now.
- I dont trust the medical field anymore....especially Dr Fauci I am not a Guinea pig
- Have you researched vaccine shedding? Do you know about the INSANE amounts of menstrual cycle upset that this vaccine has caused? Do you know that over 7000 ppl have died? Do you care that they have died at the hands of man rather than God? Do you believe in God? I don't really care about your answers if you are advocating for this vaccine and the culminating segregation it will cause. It's anti Jewish anti hashem. Much like your masks that you require your staff to wear.
- At this point I don't trust the vaccine industry at all.
- Hashem time the world
- There is not enough data, nor has it been tested adequately.
- I believe that the pandemic is ending very soon and that Be'h I will continue to do everything I can to keep my immune system strong!!
- Dont need it, experimental technology, immediate adverse event reports are exploding and many of the same events keep recurring, if this were any other drug than a vaccine, causality wouldve already been determined, long term

side effects unknown, there are many excellent treatments available, covid is simply not a killer anymore. Duration of vaccines efficacy is unknown, pharma CEOs saying boosters will be needed annually, vaccine manufacturers are indemnified.

- If I am forced to do it by government or private entities, i will be more suspicious if it. If it's optional just like the flu shot I might get it
- The safety of the vaccines have not been proven. There are so many natural cures for covid that are being restricted to ensure fear that people run to vaccinate. The vaccines do not stop people from catching covid. It is not approved by the fda, only for emergency use. It has not been fully tested like the other vaccines. I cannot emphasize this enough.
- People are getting way more reactions than the medical system is admitting. It's hard to believe that the vaccine can do a better job than our natural immune systems. When treated and supplemented most people will be fine. There are always those that can't withstand certain illnesses. However why intervene and give them very risky 'prevention'.
- Thanks o many people lying. The fact that this contract was signed and we can't know about it for 30 years is a BIG. Factor in my distrust as to what is going on. Also the removal of effective treatments and now the government is keeping us from getting antibody testing as they think we will get the vaccine . All this makes my less likely rather than more likely . I'm not an automaton that stocked out my arm without studying and thinking about it. I think it's criminal to be given this to children!!!
- I don't appreciate the fact that the government and medical professionals are not being transparent and clear about the fact that the vaccine is still in an experimental phase. The fact that there's such a push to consider the vaccine 100% safe and >90% when there's still so much unknown, makes me less inclined to trust in it. I'd much sooner trust being told "we still don't know long term impacts, but so far it seems safe."
- There is no reason to have a vaccine for covid since it doesn't exist.
- Again, it is not definitely clear how much more immunity I would get, and if they are useful against new variations
- There is so much information about possible risks the vaccine could cause that have now been

shown to be true among the deaths and many many side effects yet it doesn't seem to be that anything is being done to halt it. The j and j was halted for blood clots when way more blood clots accorded with Pfizer and moderna. Doctors are recommending people who got Covid to get the shot without one study on that population and no way to know what the ramification will be shows that they are recommending it without even having study. Pfizer and moderna's study is very poor and has many flaws. In addition, there are areas that were not tested for or addressed in their study. The fact that doctors are pushing an expiring Tal vaccine that is in process of being tested to millions of people is reckless since many scientist and epidemiologist have warned about the dangers, yet they are being censored for having an opinion. Science is about knowing all the sides and that isn't being displayed to the public.

- I want to wait a little longer and see what happens
- horrible crime against humanity!!!!
- I've had some bad personal experiences with medicines that are new. It can sometimes take several years before certain side effects are properly reported. I took singulair when it was new and suffered some side effects that didn't get reported until some ten years later. I've learned to wait a few years, to see what sort of information we learn about a new drug, before jumping in. I would, however, take a new drug if there was significant danger or risk. The risk of covid, for me, isn't high enough. However if, say twenty or thirty years from now, if the data shows that the immunity could have worn off, and I will be of course much older, and at greater risk of covid, id probably take the vaccine - especially because we will know more about side effects by then. Also I suffered awfully painful side effects from the flu shot. It was a bad experience for me
- Its an experimental vaccine not approved by the CDC. It should be an individual choice to yes or no take it. It bothers me tremendously when Dr.'s Rabbi's, Hatzola (people that are trusted and respected in our community) guarantee it is safe when the CDC website doesn't say its safe and noone knows the long term effects of taking it.
- The efficacy has not been proven. The endpoints and never been about death. They have zero long-term studies. Skipped animal trials.

Ivermectin & HQC, steroids work great if one needs treatment

- So much unknown still
- I am not a guinea pig
- It is insane why a relatively healthy woman in her 30s would subject herself to SO much unknown. The vaccine is not safe because there is absolutely no way at all that they can prove it is safe. There are no longitudinal studies. Side effects are being dismissed by doctors left and right. Anyone who says it is safe is either oblivious or lying.
- RNA vaccines have been shown to have minimal efficacy
- As all things it's about risk / reward. I had covid and was bH very mild. I therefore see no reason to get vaccine.
- There are treatments for the illness, but the vaccine is not like typical vaccines which have a live or dead part of the sickness. These were made too fast, not enough study, not approved by FDA (other than emergency use), no one is liable, too many people who have had it, have suffered from it - fatal too.
- No liability for the manufactures No effective monitoring systems in place (VAERS is a passive underreported system, the new smartphone app is like a patch on a hole) No long term placebo controlled studies (the control group has already been vaccinated) And much more
- Im concerned about what ppl say of it effecting fertility.
- I will only get it if required to travel to Israel, or for some other reason like work, school. Otherwise I will not opt to take it voluntarily.
- Right now, I have antibodies I dont think it is necessary.
- Not until they have enough data
- Too scary, I don't want to be the guinea pig, not enough testing, NO long term studies, etc.
- The same way people who have already gotten chickenpox don't get the vaccine for it so too I will not get the vaccine for COVID.
- Don't think it is worth the effort
- I don't see the need for it and I don't want to be forced to put something in my body.
- Nervous
- It's not a healthy thing. It's all hyp so the medical field/ big Pharma can make \$ and oppress the population it wants to cull.
- I am not playing along with this anymore. I believe Covid exists, I believe vaccines are

generally safe, but I am not playing along with this anymore. I am done.

- I'll tell you 1 reason . Unfortunately the legal health professionals (doctors) are sales people for the pharmaceutical's who develop remedies that will make them rich but mostly have side affects sometime small affects and sometimes terrible affects . While on the other side there are thousands of health remedies that help all types of different health issues including CORONA!!!! that are just ignored because there is no one to sponsor all the vigorous studies and testing of the FDA, and most of the time the only side affects will be that the Vitamin mineral etc. will help the person with another few hundred issues. OPEN YOUR EYES AND SEE THE TRUTH.
- I'm concerned about how it will affect fertility, and that is not something they will know so fast.
- The benefits don't seem to justify the risks at this point.
- Heard too many side effects. And for those that covid is a risk the vax is a risk. Covid is not a risk for me so no need to take vax. Too many red flags. Even way they want to start giving it to kids which covid was no risk at all for. Jist shows their agenda here
- IT'S ONLY A YEAR OLD & THE VACCINE HAS TO BE MORE DEVELOPED.
- There is no way a multi billion dollar industry is in it only for the safety of the people, although I am sure they do try to some extent but not safe for my standards. I have been vaccinated during my childhood however I have done much research from both ends and I do not feel confident in taking the COVID vaccine which may even be more risky than any other vaccine because of the way they are made.
- I'm not strongly against it, but I see no reason to do something that is not necessary and can have potential negative side effects.
- My husband doesn't think It's important and I'm not sure
- The manufacturer has ZERO liability
- I think Canada is killing people by not providing monoclonal antibodies and ivermectin and other medicines
- Don't want something that may affect my genome
- I don't trust the statistics. Here is why. Cuomo fudged the statistics for his political purposes. There are many other politicians and corporations who stand to gain huge amounts of

money and power by fudging statistics. It is naïve to think that only Cuomo would do such a thing and everyone else is pure and honest. That's why I don't trust the statistics of "safe and effective". I personally know people who developed blood clots after the vaccine. They say it is only six people. Do they think we are stupid??

- I think we need more time to see if it's really safe. It can take years for side effects to show up. Historically there have been things deemed safe until decades later the medical world changed their mind. (Example: x rays)
- I am not sure of the effectiveness of the vaccine.
- Will only take one if /when one is fully approved and there's liability
- Why take any risk, albeit small, with the vaccine when there is very little benefit to me because I already got covid and am at low risk
- Because I became very sick after getting covid and immune compromised
- Why get a vaccine when this disease is treatable through ivermectin and hydroxychloroquine.
- In yorei deia 155 says not allowed to go to a doctor a goy because he is suspected of murder. The rama says unless he has a monetary loss if he does something wrong. In the case of the vaccines they have immunity since 1986. No one can be sued therefore it is ossur to take vaccines.
- Time will tell.
- Enough is enough. There is no scientific reason why the vaccine is more effective than the natural immunity. I also don't believe at this point Covid is as dangerous as it is being made out to be. The mismanagement in the beginning was worse than the disease itself. The fear factor which is being pushed by the vaccine agenda is more dangerous than the disease (according to Daas Torah) Even Aguda spends more time and effort pushing the vaccine than they do pushing the Emunah/ Bitachon aspect, and the lesson we were supposed to learn from this gezeira. Chusunas stayed the same. Pesach programs got worse. People got used to not coming to shul. And all they do is push vaccines! If we would work on the real causes, the disease would go away. The fact that the vaccine is all anybody cares about, proves it is politically motivated.
- I am relatively young. Maybe as a senior would I reconsider

- I have had Pulmonary Embolisms both lungs. Like the Flu Vaccines, they will need repeating yearly. Just had a Pneumonia Shot.
- How long is the vaccine effective? And compare Tom how long will antibodies of corona last? Both have no Answers? Waiting for more data. Also, there exist waysto treat corona if catch it fast that are safer
- I heard that people got blood clots and also some people passed away suddenly after receiving the vaccine.
- I do not believe this vaccine is safe and I believe it is going to critically compromise the overall immunity of the population.
- There is no question that things are being covered up regarding the vaccines. The question is only to what extent. As a quick example, they claim around 4 in a million experience anaphylaxis, while a study showed 100 times that number. Once trust is lost the only way to ensure safety is waiting a long time to see if there are no effects in the community
- Major factor would be how it effects the reproductive system.
- I would get it if at some point it has been given for a while and in the long term they don't see consistent negative side effects, just like I would get the MMR vaccine. Otherwise I will not get it unless it is a necessity for my health or for someone around me that I personally value their opinion i.e. my wife.
- I'm young and afraid of it affecting fertility
- i won't take it and i was never afraid of the virus because i follow TRUE science, not fauci, cdc or other trash
- I was skeptical from the beginning about directives given in hospitals regarding the effectiveness of ventilators and also as things changed so rapidly wear a mask don't wear a mask. I didn't have confidence in guidelines and used the judgement I felt was best based on available information.
- I may get it at a later time when it's less political and more true science is out, and when we have a better idea about possible long term side effects
- Adverse reactions are NOT being reported. I work in the medical field and am on groups on social media with my colleges who are all in hospitals. We are all seeing an uptick in strokes and blood clots in people that had no preexisting conditions. And everyone has gotten the vaccine

within a few weeks. Drs are quick to say coincidence when we all see it!! the media is not reporting the thousands of adverse reactions listed on the VAERS website (and we know that 90%+ cases don't get reported) I can go on and on about reactions not being reported and drs acting dumbfounded that they don't know what's causing symptoms but right away writing off the vaccine as being the cause... scary!

- There's too many political & financial agendas attached to this vaccine. Because the media is constantly trying to censor the other side & is just busy promoting the vaccines without encouraging people to explore possible risks it makes me less trusting of it.
- I take the dangers of Covid-19 very seriously. I am careful about my health in general, and I have added more healthy eating and extra, specific supplements to my regular health regimen in light of the current danger. I have also learned a lot about effective early treatments for Covid-19 if, chas v'shalom, that were to become necessary. I respect others' choices in this matter and don't try to influence anyone not to take the "vaccine," especially since I don't assume that others will change their habits in order to strengthen their own immune systems. Personally, I fear this vaccine more than I fear Covid-19.
- I don't feel that I need it. It is worthwhile for all those who are at risk of covid to take it, but having had covid I don't feel that I'll need it.
- Fertility
- The whole vaccine is only a political issue
- The vaccine wasn't studied looking enough. I have given all my kids vaccines and taken the other vaccines myself. However, I don't want to feel pressured to take a vaccine that has only short term studies and guinea pig humans.
- i think the whole world is being too impulsive with the vaccine, not thinking too much about it, everyone just wants to get on with life and I understand that. I think the vaccine is great for the elderly that were stuck at home. my problem is, why are the health officials, doctors, and govt not pushing forward for treatment or drugs to fight the coronavirus once someone is infected with it. why are they just sitting back and saying, theres nothing to do, take advil, why are only the frum communites using lab produced antibodies to help patience fight the virus, how come the rest of the world is lining up for the vaccine but not for the lab produced antibody treatment that

has helped many people. yes this is true that only the frum community is using it, where I live its being offered by bikur cholim and hatzala, not by any hospitols. I think it would be alot more effective if they approved drugs to help fight the virus than to just scream on top of their lungs "vaccinate!!"

- I have antibodies
- The virus is treatable. I would wait many many years to see the long term side affects of the vaccine. Never has a vaccine been approved while standing on one leg, and a very shaky leg.
- Because of the side effects of the people that were vaccinated some of them very detrimental
- It's a new thing. It needs to be studied more without me. We don't know all the side effects yet. I do believe that vulnerable people should definitely get the shot.
- it is a scary thought to inject something into your body that no one knows the side effects of. this vaccine wasnt around long enough to know what it may cause in 20 years from now. no one even seems to know how long they're covered for once they get the vaccine. there's just too much unknown about it. people are saying it can cause infertility, now theyre saying its not true, how do you know what to believe anymore
- It is not FDA approved and we don't know the long term side effects
- My mother in law had a terrible reaction.
- It is only approved for emergency use. Hasn't been out long enough, side effects, possible long term effects. You can still get covid and you can still transmit it with vaccine. I do not trust something that we do not what can happen in the years to come.
- Waiting to see the statistics myself
- If the vaccine was so great and the virus was really so dangerous nobody would have needed to convince anyone to take it ppl around the world would line up to get it!
- i know of two people who got really sick about two weeks after getting the vaccine. (hospitalizations)
- 1)There's no studies on the long term effects because it hasn't been around long enough 2)I'd like to have more kids iyh and there's no studies how it affects fertility 3)im hearing way too many stories of people having really bad reactions to iy
- I have been studying doxycycline hyclate extensively for the past 5 years. Covid does not

toward health and healing instead of going toward illness

- I don't believe that the safety studies were designed and carried out fairly and I do not think there is proper safety protocol in place to catch reactions and decide what is connected to the vaccine or not. When you read the fine print, you see the flaws in how they design the studies. There is too much financial interest at stake, even within regulating bodies such as the CDC and FDA, for me to trust them unequivocally like that.
- It's technology is very shady and I truly don't trust the people politicians and medical professionals and business men who are behind it's invention
- There are many other far safer protocols for dealing with coronavirus - such as regular Vitamin C, Vitamin D and Zinc among others. For more serious cases, there are numerous options - including far more effective, cheaper and safer treatments developed - in Australia and in Israel and yet instead the only thing that is promoted is the holy vaccine - and woe to anyone who dares to challenge its 'superior' status. It is as if freedom of speech is completely non-existent - only when it comes to this topic. The eyes and ears of the community at large have been rendered blind and deaf when it comes to any possible alternative. It is scary that a community which prides itself on keeping the laws of the Torah are so unaware of the potential long term impact that this can have on our future generations. Even those who created the vaccine are shocked at how quickly society at large has accepted their treatment - which is actually not even a regular vaccine, but rather a treatment which was originally created for patients suffering from serious tumours etc. ( My mother was told this by a doctor in Israel who had worked with these types of treatments previously. ) Many medical professionals around the world have voiced their concern about its use, but have been warned not to speak out. Side effects in Israel have been numerous - yet again - many have been warned that they are forbidden to reveal any connection to the vaccine. How many people need to give up their lives or future lives in the name of this crusade? If people are willing to have dialogue and debate - that is fine - everyone is entitled to their opinion - but when any opinion that is contrary to the party line, is dismissed - that is a huge red flag - a warning sign that should be taken very seriously... We will all

have to answer Up There for being passive sheep who allow everything in the name of the saintly 'vaccine'!... Who is going to answer for this years down the line?

- It's a death shot!
- From the information I have now, even if the vaccine gets full FDA approval and is proven to be safe, I don't think it's medically necessary for me.
- I have lost a level of trust. It seems like this country cares more about what they look like to the world than the individual. Healthy people including children should've been helping the old and at risk getting their grocery, medical shopping done, getting smartphones and computers so they can connect to their family on zoom when they can't be in contact, creating systems how ppl don't have to die alone, women don't need to give birth alone and sometimes separated from their babies in such a traumatic way. Instead of all being stuck at home, bored: creating abuse, loneliness, addictions, and even suicides.
- Takes time for the body to learn what this virus is. Now that it's been around I feel the body can learn to fight it. I'm also taking vit d and zinc
- HAVE LEUKEMIA, ASTHMA, HEART DISEASE OTHER AUTOIMMUNE ISSUES
- I don't want my RNA messed with. Covid is mild in most people and, aside from the fact that I already had it, it isn't worth the risk of the side effects that are being reported, or less obvious ones that might affect my health in years to come
- These so-called "vaccines" were approved as emergency methods. There is not enough data to prove their safety or effectiveness. I am not going to have an unknown substance injected into my body.
- Because I've personally been affected just by being close to someone who had recently had the shot, where my period was induced 2 weeks early (never happened before), along with nausea, headache, and fatigue
- I HAVE NATURAL ANTIBODIES
- Insufficient information other than biased sources that "it's safe" without backup. Technology (mRNA modification) is illegal for use on humans, exception made for this purpose. Side effects so far have nothing to do with mRNA modification. No side effects having to do with mRNA modification.
- long term effects are unknown

- A person needs to be educated in preventing themselves from getting sick by eating healthy & getting enough sunshine & fresh air.
- Not enough research for vaccine to be initiated. A vaccine needs yrs of study before it's given to a public.
- It is too quick/early to be sure the long term effect of the vaccine, positive or negative. They should come out with some cure
- Herd immunity
- it's definitely not safe and the Hatzalah are responsible for hiding information from people who are being injured after taking the vaccine and they're afraid they will lose a couple dollars from the government they staying silent and forcing people to take the vaccine it's a shame and it's a crime
- For now, as I am recovered, I don't see a reason for me to get it, as we don't know the long term side effects.
- I don't want it.
- It will take years to really see what the side effects are
- I feel I've developed immunity. Vaccines are effective for only one strain. New vaccine advice keeps coming out (need 3rd dose; will need a different vaccine for other strains...)
- I don't believe that people are really getting it, or capable of hurting others by passing it on, if they had Covid already.
- It became a political statement and is used to blackmail people. Just like I don't wear ask? Because it has been proven that It doesn't protect from viruses, I won't take a vaccine that the same people are pushing, when they themselves haven't taken it.
- I don't want a shot
- I don't think it's fair to use humans as guinea pigs! Let them first try it on mice with enough time to see that no reactions happen down the line and only then offer it to humans
- everybody say that's is not safe
- I beg organizations like Hatzalah to stay OUT of people's decisions whether or not to take the experimental vaccine. Let everyone decide for themselves without pressure and bullying from 'those who know better'. Nobody knows better than a person himself what's best for him. There are PLENTY of Gedolim, Rabbanim, and LEHAVDIL Doctors and scientists who are not just hesitant, but downright opposed to the experimental vaccine. They are not pushy or assertive, and

neither should the pro-experimental-vaccine camp. Everyone should have the right and freedom to choose. And everyone should be wise enough to get broadly educated instead of drinking up the fear and political agendas of the media and their followers. Thank you for taking the time to read my views.

- Corona was not such a threat. we have all kind of viruses like swine flu and we did not develop a vaccine. Furthermore, the hospitals and nursing homes were neglecting the patients with basic food and water. Additionally it was something new and they did not know what to do to save patients lives. The CDC also did not allow for other effective measures to be used because it was not a political gain on their end. Last but not least, Dr. Fauci kept on playing with our mind and continues to play with it daily. If he can be wrong on one issue why can't our well learned and professional doctors be wrong on so many other issues. Thanks for understanding.
- Worries about side affect
- Waiting a little more time to see if develop long term side effects , meantime i have antibodies
- I had covid-19
- ITS NOT A SAFE VACCINE AND I SEE POPLE DYING FORM THE VACCINE AND I STILL WANT TO LIVE
- i have seen that Hatzalah didn't trust the government during the covid crises By doing anything in their possibility to avoid people of going to the hospital, i saw how the government handled the nursing Homes. i watched Dr fauci changing his mind during the whole Covid time Yes-No mask, SO WHY SHOULD I STILL TRUST NOW THE GOVERNMENT?? especially when it was never approved by the FDA
- i hear to many stories of people dyng and getting sick from it i don t know how it will react with all my meds it is ntot effective anyay a gainst all variants and they say you still heave to wear a mask
- Nobody has been able to explain why someone who has tested positive for antibodies needs to get the vaccine to produce antibodies
- i may get it after it is more developed
- No one knows the long term effects of this product -- which the developers say is "Not a vaccine." Many doctors around the world and in Israel have said that it is unknown what the long term effects will be. It was given an "emergency" override because of the situation. Historically, a number of vaccines were given approval and

then were discontinued because of the irrevocable damage they caused. There is no information about long term effects for this product. Already some people have died from this "vaccine" and some of the "vaccines" have been discontinued. Let me state that I have taken vaccines in the past but the information on this product -- side effects -- and lack of information for long term use -- provided by the companies that have made them is very disturbing. And it seems that it is much more dangerous than the illness itself.

- Maybe there will be side affects what they don't know yet.
- It is an experimental vaccine that was only approved on emergency basis. I do not want to be an experiment. There are too many stories of healthy people getting sick or dying r"I after vaccination I trust in Hashem to take care of me.
- Herd Immunity has been reached. Everyone was exposed to virus. I believe in strengthening Immune System to be able to fight off Viruses and bacterias.
- Not informed enough- not sure if what I'm reading is accurate info
- There is a sinister plan in this vaccine program. Do your research on Bill Gates and the World Economic forum. This was all pre-planned and the virus which was created and patented in a lab in North Carolina was created as a bio weapon and sent to the Wuhan Institute of Virology (funded by Gates foundation) for "storage" and was intentionally released. Dr Fauci, who is funded by bill Gates was heavily involved in the developing if SARS cov2 and other dangerous pathogens including the AIDS virus. Gates also is heavily invested in the pharmaceutical industry. His agenda along with his cohorts of the World Economic Forum is to depopulate the planet to save the earth from the ravages of global warming using the vaccine program as a means, while enriching the pharmaceutical industry and all those heavily invested into it. There are real videos of Gates talking about it at various events including the WEF. There are remedies and cures for COVID if treated EARLY such as hydroxychloroquine or ivermectin along with vitamin C, vitamin D, zinc and if needed, antibiotics such as Zithromax (z-pack). These were banned by WHO and many governments because these are cheap drugs that work and would foil the vaccine program which is a highly

lucrative financial enterprise and the intent to cause ADE deaths, infertility, and generally help with their depopulation agenda. This is all sourced by many doctors, scientists, microbiologists, virologists, front line doctors etc. I have many links to all this information from tons of research done by people that I am in contact with.

- There are rumors that it may affect fertility and I'm afraid of taking such a chance.
- Because the vaccine, the lockdowns, are all a slap in the face to God. He brought the virus here and He will end it in His time.
- no reason to take the vaccine after having the virus
- there's not enough research. there are too many side affects that are not being honestly addressed.
- There are no long-term studies. Animal trials all showed adverse long-term reactions within 1 to 3 years when the animals came into contact with the virus. This is called Pathogenic priming. No one knows what the shot will do long-term. It's a chilul hashem What jews are doing to Jews And how they're pressuring each other and blindly following day I and others who have been wrong time after time. People are discouraged from even questioning Ans were being lied to. It's not even FDA approved! Everyone has the right to personal medical decisions.
- My work environment is not very social. Had the virus about a year after it arrived with my medical team telling me I have a strong immune system. I believe I got it only because I wasn't feeling well - hence immune system low, and went to a wedding.
- The companies have no liability. 2. The companies are corrupt- they have been involved in lawsuits in the past. Johnson and Johnson are paying out cancer fees related to their product thats put on topically- I should allow it to enter my body via an injection, in which it will be 100% absorbed? 3. The whole point of the vaccine is to get antibodies. If you had COVID, you are still encouraged to get the vaccine? What's the point?
- Since I had the Virus, I feel that my body is imuned and the vaccine wil not be necessary.
- Because they're are people dropping dead from it and having all kinds of side effects
- Nervous that some side effects will only be known at a later time. I also hope that after the

vulnerable population is vaccinated the virus will disappear.

- not developed enough not enough research done
- I'm fairly sure it's safe but it still pays to be cautious.
- i dont feel its so safe being made in 12 months,
- Time is my best advisor
- HAD THE VIRUS AND HAVE ANTIBODIES
- Any entity or organization who encourages people to take a product that not tort liable and also not FDA approved for regular use needs to really think twice about what they are doing. Medical freedom is not to be discounted, it is everything.
- i hear alot of stories of people getting major side effects
- Medical documentation specifies the dangers involved
- if effective then only short term.
- I think people between age of 65 and 75 could get it. If they feel scared, but older than 75 people are dying from vaccine. and younger than 65 people i think can fight it. This is my personal opinion.
- Why should I inject myself with toxins and genetic modification and Gd knows what else when I'm perfectly healthy??? Gd created us in his image, he sculpted our organs and immune to function and to heal itself. Why in the world would I inject toxins to "protect" myself from something I don't have?! Doctors and pharma have failed me and my children in the past. I have learned from experiences not to trust in these for profit evil forces, my Gd is the Almighty and in Him I trust !!
- Until the technology and vaccine is proven safe and is authorized for NON emergency use. It is hard to justify taking an experimental vaccine after having the virus, having antibodies. have seen many patients suffer severe side effects and perhaps death from the vaccine and knowing that there are currently effective treatments if started early.
- I would also wait until all political interests to promote this vaccine dies down a little and then hear somewhat more of a 2 sided view about it's safety and importance for someone who already has immunity.
- im concerned about long term vaccine effects in general and specifically this one
- Can't trust drug companies who are making millions. Look at idiot Dr. Fauci.
- There are a lot of concerns about this vaccine, it doesn't look and doesn't smell good, we need to keep a watchful eye on this...
- i dont want to try new things
- I do not like to rush to do new things.
- I would only get it, if I need for traveling etc.
- I am VERY skeptical about this whole issue although I strongly am pro vaccines with other diseases. I find the vaccines were produced far too early for them to know enough about the virus. At least we were not given enough info about the vaccines & virus.
- Too much coverup by government and news agencies about the side effects and vaccine related deaths. I do not trust any of this.
- Get busy with getting the stuff that heal COVID naturally & natural preventions rather than the vaccine which based on public records killed more than 2000 people & harmed more than 50,000.
- I have a relative that passed away a week after receiving the vaccine
- I'm hearing stories about side effects and i am young and basically healthy, i don't feel it's a threat to me.
- if meds wouldn't make so much money then pharma wouldn't lobby all the politicians & buy so many ads in the media & we know from the torah that shochad blinds the eyes of the chachumem & it corrupts the tzadikem now if they would be held liable for damages then I would trust it more. Just like any other product that damages they are held liable but here how can we trust them when they have no consequences you wouldn't accept this for food, a car or appliances or anything else plus the heads of the fda cdc nih & health depts. have a revolving door going from pharma to them & back 1 example is Dr. Julie Gerberding used to work at the cdc directing vaccines then she went to work for merk as Executive Vice President with a large pay so we cant trust the fox watching the hen house
- i am a young female adult and i feel that my immune system is strong enough to be able to fight covid if i will get it and in addition i dont trust a vaccine that was made under such circumstances
- i'm a yong person who had COVID already, therefore i don't see a need to get it

- I have a very sensitive system and I am definitely concerned about putting this as yet unproven and controversial vaccine
- I truly believed that most deaths that were blamed on covid happened because the hospitals did not treat the patients properly
- I am not a guinea pig. this vaccine was never safely tested and people getting it now are not being followed long enough to know if there are any bad reactions.
- I'm afraid I'll refuse
- I can't play because I won the new crown
- I'm still thinking about security
- I don't think vaccines are credible
- Mainly i don't see any reason to take it as i explained.
- I probably will not get the vaccine as long as my doctor does not recommend it.
- Check out Vaers data base and that's only a few % of the side effects as congress report.....
- People say it's dangerous for women who want to have kids.
- As far as i know they are not sure vaccines help and there is a good few that had side effects and I don't see that they should reduce pressure on vaccinated people as letting them gather or enter certain places so why should I take it
- I'm aware that animal trials in the past yielded very bad results and this time around they skipped the animal trials altogether It saddens me to see hatzolah selling their own ppl for money
- There have been too many cases of severe side effects and death from it
- I Don't think that covid is such a risk for people my age
- will only take if a must to be able to fly
- I will not allow my body to undergo such a potentially dangerous medical experiment. I'm not afraid of covid, there are many known safe alternatives available to fight against the virus. The effectiveness is highly unknown (there's speculation among the medical community now that a 3rd dose will be needed within 6 months, and yearly boosters!!!). I keep hearing about people dying or having strokes within days/weeks of receiving the shot. Similar vaccines have been in development over the past several years, but never make it to the market since they failed during the animal trials. The animals would die when exposed to the virus that they had been vaccinated for. The current

vaccine skipped over the animal trials and went straight to human trials.

- I am in the health field I have seen so many damaged children and adults from vaccinations in general and I am staying on top of the international scene of the side effects from the new corona vaccination I have seen devastating long-term fertility effects from the Gardasil HPV vaccination and this one certainly has not even been around long enough to truly be tested RAVVOSNER has written very strongly in addition to RAVWACHTFOGEL and there are many other experts in the field Both nationally and internationally as well who are trying to speak out and many who have already lost licenses for speaking out. I am currently dealing with 3 to 4 young women whose fertility has been compromised from past vaccinations and my niece in Israel who runs an ICU unit has three single friends who have very significant side effects from the corona vaccination. I feel very strongly that everyone has a right to choose and it's very interesting that the people who are choosing not to take it are not telling the rest of the world what to do and the ones who are choosing to take it are making it very difficult for the non-vaccinated people to live comfortable and happy lives. one example, a relative of mine is graduating in June and the YESHIVA just sent out a message that only parents and grandparents who can show proof of the two vaccinations will be allowed to come to the graduation this is a horror. the SHUL is segregating the ones who have taken the vaccination from everyone else this is not government mandated we are doing this to ourselves. I see every day people who have taken the vaccinations and wearing masks still fraught with anxiety and fear when they should feel very comfortable with their decision and feel the protection of the Vaccination that's why they took it. On top of it all my physician has recommended that I not take it there are many people with either underlying health concerns auto immune issues or healthy antibodies that would be more at risk from taking a vaccination they should be an individual decision that each family can make for themselves otherwise we are turning back the hands of time to very dark and frightening period.
- There are many effective treatments and I believe I am in a high recovery rate statistic. Why would I take

an experimental treatment that will take years to determine the long term affects??

- ASA ABOVE HAD THE VIRUS
- There's no valid reason why a yid should put themselves in a position of endangering themselves, for something not proven to work and is proven to have adverse side effects.
- I know people who died, were hospitalized and had other side effects from it.
- No long term studies. Anything anyone says is a side effect is hushed by media and medical professionals as "coincidence".
- It has not been proven safe nor effective. It was rushed to market and is not FDA approved. Thousands of people are reporting adverse events post injection and are being dismissed. There are definitely political motives pushing the agenda.
- There's no need to get it
- I have many friends who got it and felt unwell for a long time after it and shared other negative side affects and they didn't even bother reporting so I think it's not as safe as people think
- I won't take a vaccine that isn't on the market for at least 30 years.
- Too many people are worried about getting vaccinated
- It's not a good time to get vaccinated if you're sick.
- allergic constitution
- Because I have learned that when taking advice, in any area of life, one also has to check in with oneself to see if it makes sense to oneself, and if it does not, and I go against my intuition, I will only have myself to blame. Over here, if something would go wrong after the injection, the professionals never guaranteed anything to me, they only made strong suggestions based on their knowledge and experience in their area of expertise; and I may be left one day living with the effects of something, and will be left with only myself to blame.
- I'm afraid it won't work out
- Doctors still don't have answers of how often we will need it. Doctors still don't have a finalized one that works with all the strains. And until they say no need for masks and social distancing I don't see the point of taking the shot.
- Rabbinic guidance advised not to.
- They have no idea what can happen long term. It's completely experimental and it is shocking

that the Jewish people are so willing to be part of the largest human experiment that has ever been done. They are using people as guinea pigs and people are too blind to even see it. It is not even FDA approved and it was rushed to the market.

- As much as it can still be a threat and other strains may be around. There are many ways that covid can be treated with for example with HQC, Ivermectin and many other things that have been proven to be very effective. To inject something into yourself that can have dangerous side effects and is risky if there are other options available seems to be a very bad choice.
- Nobody knows what the long-term side effects will be. My daughter (who does research in a lab) is very against it.
- No money doesn't matter
- Lack of safety and efficacy and I refuse to be part of the world wide study. I choose to be in the control group. Study ends 2023. I am not a lab rat. Coercing people to partake in an experiment violates the Nuremberg code.
- I know people that had the vaccine and had side affects. They were told it was normal.
- most people I asked that took the vaccine including non-Jews told me that in the days after getting the vaccine they had covid symptoms, so its nothing more then getting the virus then what's the point of it? for the people its dangerous this is dangerous as well, and other people why should they want to have fever for a few days? but if the government says that whoever gets the vaccine could go without a mask and gather with more people I would take it because its worth it, as long the vaccinated people also have to follow the rules why should I bother taking it?
- 1-VAERS.gov 2-Vaccine has NO liability on the pharmaceutical companies!!!!
- doc said since I have antibodies, no need for now to get the vaccine.
- the way they push it and never admit that anything wrong ever happened caused by the vaccine they lost the trust.
- There have already been several thousand deaths as a direct result of this vaccine. Some argue that covid has killed many people so it's worth the cost (of human life!). However, the speed with which this mrna gene (chemo)therapy agent was developed leaves much doubt that this vaccine will prevent any morbidity at all.

- i think the the media is all biased and doctors are not smart anymore, they read the same journals that everyone reads on the media
- It has not proven to be a better defense the having had covid. At this time there are no documented cases of people getting covid again. At least not in numbers..
- I'm not a vaccine addict nor an anti vaccination guy but the amount of people getting hurt or Covid after being vaccinated concerns me, it may take time for the vaccine to be "touched up"
- already had the virus
- Im worried abt how safe it is and about the side effects.
- covid isn't that scary
- I want to know there are no side effects
- No reason for me to take it because I'm young and healthy and nothing is happening to people my age without underlying conditions
- No reason to get a new experimental vaccine that doesn't even have a regular fda approval for a virus that I already had and it has a 99plus% survival rate for healthy people
- There is not enough proof of their efficacy as well as the side effects.
- Kna"I IDONT NEED It!
- I work on staying healthy and doing healthy things. I don't want to inject myself with poison.
- I am really not that good with vaccines, I generally get very sick after
- if you need a 3rd booster shot or any year so for the first year anti bodies are affective
- I do not want to be a guinea pig. I do not want a vaccine that is all of a sudden political. It was developed incredibly quickly and is still under EU and not even FDA approved yet.. We don't know long term affects, such as fertility, bones... I know and have seen first hand how different people have reacted to receiving the vaccine (all diff brands), strokes, bell's palsy, blood clots, seizures. If it is for herd immunity, then why don't people check their antibodies before receiving the vaccine? No one knows how long these vaccine antibodies will last, and then there will be boosters. Once someone starts, you can't stop. There are new strands of Covid that the vaccine may not even help against. Covid does not spread in the way that we know. People who isolate get it, people who are intimately with someone who has covid doesn't get it.
- I'm not interested in being experimented on, especially, if it's not FDA approved, when there's

quite a few other treatments available. The fear mongering is just a tactic to indoctrinate and keep ppl imprisoned by not allowing them to think. Why aren't the illegal people being vaccinated? They could be bringing in Covid or other diseases! There should be mass Vaccination at the border! The hypocrisy is too much! You can't stop what's coming!

- I believe this vaccine is still in the experimental stages and refuse to be a part of it. Hashem gave me a healthy immune system BH and no vaccine can top that as we're seeing Pfizer already saying there is a need for a 3rd dose. And unfortunately after a huge vaccine drive in Heimish BP the J&J vaccine was disconnected. I'm not willing to be a lab rat at this point in my life.
- All previous studies using using mRNA vaccines in the past have led to death and serious illness in the experimental group. This is why it was never done on humans before (except once on babies in the 60's where many babies got sick and 2 died).
- I am nervous about the long term affects My benefit doesn't outweigh the risk at this point in time
- it is known to be experimental on large populations.It is based upon hypothetical models rather than actual data. There has been no isolation of this virus. Statistics are dependent upon hypothetical information. The vax, being based upon Rna, is not a "vaccine" as we know it, and genetically changes the way that cells respond which has been shown to be detrimental to numbers of receivers.This medical treatment has not been put thru any way near enough trials before placing it into human bodies, young and old. Not enough studies done upon the fertilization.
- People with high antibodies have bad reactions to the vaccine.
- Unless I MUST travel to a place that requires it i dont feel I need it.
- Rate of survival is a higher then vaccine effectiveness
- People have lost baby's and had sideaffects after
- If my doctor tells me to take it I will. There is no reason for me to rush and take it since I still have antibodies. A family member that took it was weak after taking it but I'm not concerned about the vaccine.
- My decision to get the vaccine will b solely based if it will allow me freedom to travel... Basically

for political reason . If the vaccines do not make a difference in free travel I will most definitely not take the vaccine.

- If my body was able to fight the virus then why get a vaccine that has chances of blood clots and other side effects?
- I would be sure about it if it didn't become a politicized topic, therefore making its credibility more trustworthy.
- More studies needed.
- I feel that the elderly and people with medical conditions should consider the vaccine, a healthy person should be able to fight the present strains of the virus
- I am very concerned about long term effects.
- I already told you.
- I will maybe get later on if I need to get it
- Since this virus is not dangerous for most people that don't have a compromised immune system and the fact that I got it right in the beginning and had almost no side effects
- Covid has been heavily politicized, and the health and well-being of people hasn't seemed to be the prime concern. It is being used as a control tool by the same people who want to heavily control people in other areas.
- Why isn't the government considering natural antibodies as the same protection as vaccine
- If a person continues to check for anti bodies why should they get the vaccine?
- I had covid and recovered
- We're not getting the real answers (issues) of the side effects let it be out for a long time and then will see I'm totally for vaccines but here there are too many controversial statements for people for yes and for no
- I recovered from covid why in the world would I get the vaccine When my daughter got chickenpox the dr said she doesn't need the vaccine. Same thing here
- It's political, and a real agenda behind it,
- I am a diehard. And am afraid to take the shot!
- No one knows what the long-term effects of this vaccine are. There are no long-term studies on any mRNA based vaccines, and the technology has been unapproved over and over again - yet now it's been speed-cleared.
- I can't trust anyone .
- I'm against seat belt fines. Hope this helps.
- The same reason I don't take the flu vaccine yearly it's just another hoax and way the government and pharma companies make money
- Once it's approved I would think about getting it. As long as it's a test, I prefer to stay in the unvaccinated control group
- Total absolute lack of trust in authority/power structure.
- I am afraid of the long term effects
- 1) many doctors don't recommend the vaccines. 2) Kary Mullis the nobel prize winner and inventor of the PCR test (used to test for covid-19) already at a TV interview back in 1993 strongly criticized Dr fauci and called him out for being a fraud, why would I trust him with the vaccines? listen to him for yourself here: <https://rumble.com/vbqqod-kary-mullis-pcr-test-inventor-calls-fauci-a-fraud.html> 3) many of the "medical experts" recommending the vaccines are relying on the FDA, yet it can't be said that the FDA is clean from corruption
- You can not rely on the health department, and without knowing that there are no risky side effects till the next years to come, it's more safe to be passive.
- As long as I have antibodies I'm holding off.
- Only way I will get it if I will have to for whatever reason
- So far (by last week) in just the US alone, there have been over 2700 deaths reported to the VAERS site. That means that the COVID vaccine adverse events have already surpassed 11 years (!) of severe side effects reported from all other vaccines combined. Additionally and most importantly - A problem with VAERS is that it is a passive reporting system, relying on voluntary, rather than mandatory, reporting. As such, numerous reviews of VAERS have found that only a tiny fraction of vaccine adverse events are reported. For example, an HHS-funded review of vaccine adverse events over a three-year period by Harvard Medical School involving 715,000 patients found that "fewer than 1% of vaccine adverse events are reported."! A U.S. House Report similarly stated: "Former FDA Commissioner David A. Kessler has estimated that VAERS reports currently represent only a fraction of the serious adverse events." IN THE LAST ONE WEEK ALONE, THE VAERS REPORTED SEVERE SIDE EFFECTS AND DEATHS OF THE COVID VACCINE WENT UP BY 20%. And I'm sure we are just at the beginning... So basically I will not be the Ginny Pig. How do we know what will happen to all the vaccine recipients in two - five - ten or even twenty years down the line. Science cannot

predict everything! At that point it will be too late for those millions of people. G-D should protect us all. One more point- I have read many studies and been in touch with several leading Rabbanim that have a vast knowledge in the medical field and they have confirmed that there may very well be a chance of fertility issues from the vaccine for some people and they too have advised that regular healthy people should refrain from taking it, at least for the near future. I believe it is against every belief in our Torah and Emunah to put a young, healthy person in a position to take such a vaccine. If things will change in the future no one knows, however I doubt it. But if for some unexpected reasons it does, the issue can be revisited in years to come. Hatzlocha in all the great work you do for the klal! With much appreciation.

- **Reasons I Won't Be Getting a COVID Vaccine**  
Knowing how contentious this issue is, part of me would rather just write about something else. But I believe the discussion/news is so one-sided that I should speak up. As I always strive to do, I promise to do my best to be level-headed and non-hysterical. I'm not here to pick a fight with anyone, just to walk you through some of what I've read, my lingering questions and explain why I can't make sense of these COVID vaccines. Three ground rules for discussion: If you care to engage on this topic with me, excellent. Here are the rules. I am more than happy to correspond with you if: You are respectful and treat me the way you would want to be treated. You ask genuinely thoughtful questions about what makes sense to you. You make your points using sound logic and don't hide behind links or the word "science." If you do respond, and you break any of those rules, your comments will be ignored/deleted. With that out of the way, let me say this: I don't know everything, but so far no one has been able to answer the objections below. So here are the reasons I'm opting out of the COVID vaccine: 1. Vaccine makers are immune from liability. The only industry in the world that bears no liability for injuries or deaths resulting from their products are vaccine makers. As first established in 1986 with the National Childhood Vaccine Injury Act, and reinforced by the Public Readiness and Emergency Preparedness (PREP) Act, vaccine makers cannot be sued, even if they are shown to be negligent. The COVID vaccine makers are allowed to create a one-size-fits-all product, with

no testing on sub-populations (i.e. people with specific health conditions), and yet they are unwilling to accept any responsibility for any adverse events or deaths their products cause. If a company is not willing to stand behind its product as safe, especially one rushed to market, I am not willing to take a chance on that product. No liability. No trust. Here's why, ¶ 2. The checkered past of vaccine companies. The four major companies who are making COVID vaccines are/have either: Never brought a vaccine to market before COVID (Moderna and Johnson & Johnson). Are serial felons (Pfizer, and AstraZeneca). Are both (Johnson & Johnson). Moderna had been trying to "Modernize our RNA" (thus the company name) for years, but had never successfully brought any product to market. How nice for the company to get a major cash infusion from the government to keep trying. In fact, all major vaccine makers (save Moderna) have paid out tens of billions of dollars in damages for other products they brought to market when they knew those products would cause injuries and death, see Vioxx, Bextra, Celebrex, Thalidomide and opioids as a few examples. If drug companies willfully choose to put harmful products in the market, when they can be sued, why would we trust any product where they have no liability? Three of the four COVID vaccine makers have been sued for products they brought to market even though they knew injuries and deaths would result. Johnson & Johnson has lost major lawsuits in 1995, 1996, 2001, 2010, 2011, 2016, 2019 (For what it's worth, the company's vaccine also contains tissues from aborted fetal cells, perhaps a topic for another discussion). Pfizer has the distinction of the biggest criminal payout in history. The company lost so many lawsuits it's hard to count. You can check out its rap sheet here. Maybe that's why Pfizer is demanding that countries where they don't have liability protection put up collateral to cover vaccine-injury lawsuits. AstraZeneca has similarly lost so many lawsuits it's hard to count. Here's one. Here's another, ¶ you get the point. And in case you missed it, the company had its COVID vaccine suspended in at least 18 countries over concerns of blood clots, and it completely botched its meeting with the FDA with numbers from their study that didn't match. Oh, and apparently Johnson & Johnson (whose vaccine was granted Emergency Use Authorization in the U.S.) and

AstraZenca (whose vaccine is not approved in the U.S.), had a little mix up in their ingredients, 15 million doses. Oops. Given the free pass from liability, and the checkered past of these companies, why would we assume that all their vaccines are safe and made completely above board? Where else in life would we trust someone with that kind of reputation? To me that makes as much sense as expecting a remorseless, abusive unfaithful lover to become a different person because a judge said deep down they are a good person. No. I don't trust them. No liability. No trust. Here's another reason why I don't trust them, Ask Congress to Investigate COVID Origins - Take Action 3. Ugly history of attempts to make coronavirus vaccines There have been many attempts to make viral vaccines in the past that ended in utter failure which is why we did not have a coronavirus vaccine in 2020. In the 1960s, scientists attempted to make an RSV (respiratory syncytial virus) vaccine for infants. In that study, they skipped animal trials because the trials weren't required then. In the end, the vaccinated infants got much sicker than the unvaccinated infants when exposed to the virus in nature, with 80% of the vaccinated infants requiring hospitalization. Two of them died. After 2000, scientists made many attempts to create coronavirus vaccines. For the past 20 years, all ended in failure because the animals in the clinical trials got very sick and many died, just like the children in the 1960s. You can read a summary of this history/science here. Or if you want to read the individual studies you can check out these links: In 2004, attempted vaccine produced hepatitis in ferrets. In 2005, mice and civets became sick and more susceptible to coronaviruses after being vaccinated. In 2012, the ferrets became sick and died. And in this study, mice and ferrets developed lung disease. In 2016, this study also produced lung disease in mice. The typical pattern in the studies referenced above is that the children and the animals produced beautiful antibody responses after being vaccinated. The manufacturers thought they hit the jackpot. The problem came when the children and animals were exposed to the wild version of the virus. When that happened, an unexplained phenomenon called antibody dependent enhancement, also known as vaccine enhanced disease, occurred where the immune system produced a "cytokine storm" (i.e. overwhelmingly

attacked the body) and the children/animals died. Here's the lingering issue: The vaccine makers have no data to suggest their rushed vaccines have overcome that problem. In other words, never before has any attempt to make a coronavirus vaccine been successful, nor has the gene-therapy technology in mRNA "vaccines" been safely brought to market. We might assume that because the companies received billions of dollars in government funding, they must have figured out that problem. Except they don't know if they have. 4. The 'data gaps' submitted to FDA by vaccine makers When vaccine makers submitted their papers to the U.S. Food and Drug Administration (FDA) for the Emergency Use Authorization (which is not the same as a full FDA approval), among the many "data gaps" they reported was that they have nothing in their trials to suggest they overcame that pesky problem of vaccine enhanced disease. They simply don't know if the vaccines they've made will also produce the same cytokine storm (and deaths) as previous attempts at such products. As Dr. Joseph Mercola points out, "Previous attempts to develop an mRNA-based drug using lipid nanoparticles failed and had to be abandoned because when the dose was too low, the drug had no effect, and when dosed too high, the drug became too toxic. An obvious question is: What has changed that now makes this technology safe enough for mass use?" If that's not alarming enough, here are other gaps in the data, in other words, there is no data to suggest safety or efficacy regarding: Anyone younger than age 18 or older than age 55. Pregnant or lactating mothers. Autoimmune conditions. Immunocompromised individuals. No data on transmission of COVID. No data on preventing mortality from COVID. No data on duration of protection from COVID. In case you think I'm making this up, or want to see the actual documents sent to the FDA by Pfizer and Moderna for their Emergency Use Authorization, you can check out this, or this respectively. The data gaps can be found starting with page 46 and 48 respectively. For now let's turn our eyes to the raw data the vaccine makers used to submit for emergency use authorization, 5. No access to raw data from trials Would you like to see the raw data that produced the "90% and 95% effective" claims touted in the news? Me too. But the companies won't let us see that data. As pointed out in the BMJ, something

about the Pfizer and Moderna efficacy claims smells really funny. There were "3,410 total cases of suspected, but unconfirmed COVID-19 in the overall study population, 1,594 occurred in the vaccine group vs. 1,816 in the placebo group." Wait, what? Did they fail to do science in their scientific study by not verifying a major variable? Could they not test those "suspected but unconfirmed" cases to find out if they had COVID? Why not test all 3,410 participants for the sake of accuracy? Can we only guess they didn't test because it would mess up their "90-95% effective" claims? Would it not be prudent for the FDA to expect (demand) the vaccine makers test people who have "COVID-like symptoms," and release their raw data so independent third parties could examine how the manufacturers justified the numbers? It's only every citizen of the world we're trying to get to take these experimental products, why did the FDA not require that? Isn't that the entire purpose of the FDA anyway? Good question. Foxes guarding the hen house? No liability. No trust.

6. No long-term safety testing With products that have been on the market only a few months, we have no long-term safety data. In other words, we have no idea what this product will do in the body months or years from now, for any population. Given all the risks above (risks that all pharmaceutical products have), would it not be prudent to wait to see if the worst-case scenarios have indeed been avoided? Would it not make sense to want to fill those pesky "data gaps" before we try to give this to every man, woman and child on the planet? That would make sense. But to have that data, they need to test it on people, which leads me to my next point.

7. No informed consent What most who are taking the vaccine don't know is that because these products are still in clinical trials, anyone who gets the shot is now part of the clinical trial, part of the experiment. Those (like me) who do not take it, are part of the control group. Time will tell how this experiment works out. But, you may be asking, if the vaccines are causing harm, wouldn't we be seeing that all over the news? Surely the FDA would step in and pause the distribution? (Editor's note: federal health officials on Tuesday paused the Johnsons & Johnson vaccine over concerns related to blood clots). If the Vaccine Adverse Events Reporting System (VAERS), the government-run system for reporting deaths and

injuries after vaccines, worked, maybe things would be different, but.

8. Under-reporting of adverse reactions and deaths According to a Harvard study (commissioned by our own government), less than 1% of all adverse reactions to vaccines are actually submitted to VAERS. While the problems with VAERS have not been fixed (as you can read about in this letter to the CDC), at the time of this writing, VAERS reports over 2,200 deaths from the current COVID vaccines, as well as close to 60,000 adverse reactions. If those numbers represent only 1% of the total adverse reactions (or .8% to 2% of what this study published recently in the JAMA found), you can do the math, but that equates to somewhere around 110,000 to 220,000 deaths from the vaccines to date, and a ridiculous number of adverse reactions. Bet you didn't see that on the news. That death number would currently still be lower than the 424,000 deaths from medical errors that happen every year (which you probably also don't hear about), but we are not even six months into the rollout of these vaccines yet. If you want a deeper dive into the problems with the VAERS reporting system, you can check out this or this. But then there's my next point, which could be argued makes these COVID vaccines seem pointless.

9. The vaccines don't stop transmission or infection Aren't these vaccines supposed to be what we've been waiting for to "go back to normal"? Nope. Why do you think we're getting all these conflicting messages about needing to practice social distancing and wear masks after we get a vaccine? The reason is because these vaccines were never designed to stop transmission or infection. If you don't believe me, I refer you again to the papers submitted to the FDA I linked to above which show that the primary endpoint (what the vaccines are meant to accomplish) is to lower your symptoms. Sounds like just about every other drug on the market right? That's it, lowering your symptoms is the big payoff we've been waiting for. Does that seem completely pointless to anyone but me? It can't stop us from spreading the virus. It can't stop the virus from infecting us once we have it. To get the vaccine is to accept all the risk of these experimental products and the best it might do is lower symptoms? There are plenty of other things I can do to lower my symptoms that don't involve taking what appears to be a really risky product. Now for the next

logical question: If we're worried about asymptomatic spreaders, would the vaccine not make it more likely that we are creating asymptomatic spread? If it indeed reduces symptoms, anyone who gets it might not even know they are sick and thus they are more likely to spread the virus, right? For what it's worth, I've heard many people say the side effects of the vaccine (especially the second dose) are worse than catching COVID. I can't make sense of that either. Take the risk. Get no protection. Suffer through the vaccine side effects. Keep wearing your mask and social distancing and continue to be able to spread the virus. It gets worse.

10. People are catching COVID after being fully vaccinated. Talk about a bummer. You get vaccinated and you still catch COVID. It's happening in Washington State. It's happening in New York. It's happening in Michigan. It's happening in Hawaii. It's happening in several other states too. It happened to 80% of 35 nuns who got the vaccine in Kentucky. Two of them died by the way. In reality, this phenomenon is probably happening everywhere, but those are the ones making the news now. Given the reasons above (and what's below), maybe this doesn't surprise you, but bummer if you thought the vaccine was a shield to keep you safe. It's not. That was never the point. If 66% of healthcare workers in L.A. are going to delay or skip the vaccine, maybe they aren't wowed by the rushed science either. Maybe they are watching the shady way deaths and cases are being reported.

11. Overall death rate from COVID. According to the CDC's own numbers, COVID has a 99.74% survival rate. Why would I take a risk on a product, that doesn't stop infection or transmission, to help me overcome a cold that has a .26% chance of killing me, which actually in my age range is has about a .1% chance of killing me (and .01% chance of killing my kids). With a bar (death rate) that low, we will be in lockdown every year, i.e., forever. But wait, what about the 500,000-plus deaths, that's alarming right? I'm glad you asked.

12. Bloated COVID death numbers. Something smells really funny about this one. Never before in the history of death certificates has our own government changed how deaths are reported. Why now, are we reporting everyone who dies with COVID in their body, as having died of COVID, rather than the co-morbidities that actually took their life? Until COVID, all

coronaviruses (common colds) were never listed as the primary cause of death when someone died of heart disease, cancer, diabetes, autoimmune conditions or any other major comorbidity. The disease was listed as the cause of death, and a confounding factor like flu or pneumonia was listed on a separate line. To bloat the number even more, the World Health Organization and the CDC changed their guidelines such that those who are suspected or probable (but were never confirmed) of having died of COVID, are also included in the death numbers. If we are going to do that then should we not go back and change the numbers of all past cold and flu seasons so we can compare apples to apples when it comes to death rates? According to the CDC's own numbers, (scroll down to the section "comorbidities and other conditions"), only 6% of the deaths being attributed to COVID are instances where COVID seems to be the only issue at hand. In other words, reduce the death numbers you see on the news by 94% and you have what is likely the real numbers of deaths from just COVID. Even if the former CDC director is correct and COVID-19 was a lab-enhanced virus (see Reason #14 below), a .26% death rate is still in line with the viral death rate that circles the planet every year. Then there's this Fauci guy. I'd really love to trust him, but besides the fact that he hasn't treated one COVID patient, you should probably know.

13. Fauci and others at NIAID own patents on the Moderna vaccine. Thanks to the Bayh-Dole Act, government workers are allowed to file patents on any research they do using taxpayer funding. Tony Fauci owns more than 1,000 patents (see this video for more details), including patents being used on the Moderna vaccine, for which he approved government funding. In fact, the National Institutes of Health (NIH), which oversees the National Institute of Allergy and Infectious Diseases (NIAID), of which Fauci is the director, claims joint ownership of Moderna's vaccine. Does anyone else see this as a major conflict of interest, or criminal even? I say criminal because there's also this pesky problem that makes me even more distrustful of Fauci, NIAID, and the NIH in general.

14. Fauci is on the hot seat for illegal gain-of-function research. What is "gain-of-function" research? It's where scientists attempt to make viruses gain functions, i.e. make them more transmissible and deadlier. Sounds at least a touch unethical,

right? How could that possibly be helpful? Our government agreed, and 2014, banned the practice. So what did the Fauci-led NIAID do? They pivoted and outsourced the gain-of-function research (in coronaviruses no less) to China, to the tune of a \$600K grant. Mr. Fauci, you have some explaining to do, and I hope the cameras are recording when you have to defend your actions. For now, let's turn our attention back to the virus.

15. The virus continues to mutate. Not only does the virus (like all viruses) continue to mutate, but according to world-renowned vaccine developer Geert Vanden Bossche (whom you'll meet below if you don't know him) it's mutating about every 10 hours. How in the world are we going to keep creating vaccines to keep up with that level of mutation? We're not. Might that also explain why fully vaccinated people are continuing to catch COVID? Why, given that natural immunity has never ultimately failed humanity, do we suddenly not trust it? Why, if I ask questions like the above, or post links like what you find above, will my thoughts be deleted from all major social media platforms? That brings me to the next troubling problem I have with these vaccines.

16. Censorship and the complete absence of scientific debate. I can't help but get snarky here, so humor me. How did you enjoy all those nationally and globally televised, robust debates put on by public health officials, and broadcast simultaneously on every major news station? Wasn't it great hearing from the best minds in medicine, virology, epidemiology, economics and vaccinology, from all over the world, as they vigorously and respectfully debated things like: Lockdowns Mask wearing Social-distancing Vaccine efficacy and safety trials How to screen for susceptibility to vaccine injury Therapeutics, (i.e. non-vaccine treatment options) Wasn't it great seeing public health officials (who never treated anyone with COVID) have their "science" questioned? Wasn't it great seeing the FDA panel publicly grill the vaccine makers in prime time as they stood in the hot-seat of tough questions about products of which they have no liability? Oh, wait, you didn't see those debates? No, you didn't. Because they never happened. What happened instead was heavy-handed censorship of all but one narrative. Mark Zuckerberg can question vaccine safety, but I can't? When did the First Amendment become a suggestion? It's the FIRST Amendment, Mark,

the one our founders thought was most important. With so much at stake, why are we fed only one narrative. Shouldn't many perspectives be heard and professionally debated? What has happened to science? What has happened to the scientific method of always challenging our assumptions? What happened to lively debate in this country, or at least in Western society? Why did anyone who disagrees with WHO, or the CDC get censored so heavily? Is the science of public health a religion now, or is science supposed to be about debate? If someone says "the science is settled" that's how I know I'm dealing with someone who is closed minded. By definition science (especially biological science) is never settled. If it was, it would be dogma, not science. I want to be a good citizen. I really do. If lockdowns work, I want to do my part and stay home. If masks work, I want to wear them. If social distancing is effective, I want to comply. But, if there is evidence they don't (masks for example), I want to hear that evidence, too. If highly credentialed scientists have different opinions, I want to know what they think. I want a chance to hear their arguments and make up my own mind. I don't think I'm the smartest person in the world, but I think I can think. Maybe I'm weird, but if someone is censored, then I really want to hear what they think. Don't you? To all my friends who don't have a problem with censorship, will you have the same opinion when what you think is censored? Is censorship not the technique of dictators, tyrants and greedy, power-hungry people? Is it not a sign that those who are doing the censoring know it's the only way they can win? What if a man who spent his entire life developing vaccines was willing to put his entire reputation on the line and call on all global leaders to immediately stop the COVID vaccines because of problems with the science? What if he pleaded for an open-scientific debate on a global stage? Would you want to hear what he has to say? Would you want to see the debate he's asking for?

17. World's leading vaccinologist is sounding the alarm. Here is what may be the biggest reason this COVID vaccine doesn't make sense to me. When someone who is very pro-vaccine, who has spent his entire professional career overseeing the development of vaccines, is shouting from the mountaintops that we have a major problem, I think the man should be heard. In case you missed it, and in case you care

to watch it, here is Geert Vanden Bossche, explaining: Why the COVID vaccine may be putting so much pressure on the virus that we are accelerating its ability to mutate and become more deadly. Why the COVID vaccines may be creating vaccine-resistant viruses (similar to antibiotic resistant bacteria). Why, because of previous problems with antibody dependent enhancement, we may be looking at a mass casualty event in the next few months/years. If you want to see/read about a second, and longer, interview with Vanden Bossche, where he was asked some tough questions, you can check this out. If half of what he says comes true, these vaccines could be the worst invention of all time. If you don't like his science, take it up with him. I'm just the messenger. But I can also speak to COVID personally, ¶ 18. I already had COVID I didn't enjoy it. It was a nasty cold for two days: Unrelenting butt/low-back aches Very low energy Low-grade fever It was weird not being able to smell anything for a couple days. A week later, coffee still tasted a little "off." But I survived. Now it appears (as it always has) that I have beautiful, natural, life-long immunity, ¶ not something likely to wear off in a few months if I get the vaccine. In my body, and my household, COVID is over. In fact, now that I've had it, there is evidence the COVID vaccine might actually be more dangerous for me. That is not a risk I'm willing to take. In summary The above are just my reasons for not wanting the vaccine. Maybe my reasons make sense to you, maybe they don't. Whatever does makes sense to you, hopefully we can still be friends. I for one think there's a lot more that we have in common than what separates us. We all want to live in a world of freedom. We all want to do our part to help others and to live well. We all want the right to express our opinions without fearing we'll be censored or viciously attacked. We all deserve to have access to all the facts so we can make informed decisions. Agree or disagree with me, I'll treat you no differently. You're a human just as worthy of love and respect as anyone else. For that I salute you, and I truly wish you all the best. I hope you found this helpful. If so, feel free to share. If not, feel free to (kindly) let me know, in the comments below, what didn't make sense to you.
